

## International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

version 21 (revised Feburary 2021)

## INTRODUCTION

This Equivalent European Union Organic Production & Processing Standard for Third Countries was commissioned by, and compiled for, the Accredited Certification Bodies, Brooklyn Park, MN, USA. It has been adapted from the European Regulations (EC) 834/2007 and the more detailed implementing rules in (EC) 889/2008 to provide a base standard for the Accredited Certification Bodies and their certified organic operators (producers, processors and traders) working outside the European Union.

This standard combines, rationalises and simplifies (EC) 834/2007 and the more detailed implementing rules in (EC) 889/2008 and adapts them for use outside the legal framework of the European Union, thus providing production rules to be used by operators for gaining certification equivalent to that described in (EC) 834/2007.

The two original Regulations include many requirements of the control system relevant to the control bodies and many administrative requirements relevant to government authorities and the European Commission itself. These have been removed (834.22, 834.27, 834.29-42, 889.48-56, 889.64-65, 889.67, 889.71, 889.80-88, 889.90-97) to leave only the requirements that need to be applied by operators. The Accredited Certification Bodies using this standard will be required to demonstrate that they apply equivalent control measures to those required within the EU.

Rules for organic aquaculture animal and seaweed production have been added, as of September 2010. These rules are based on the EU Commission Regulation (EC) No 710/2009 and 834/2007. The standards for aquaculture animal (834.15) and seaweed (834.13) have also been re-inserted to update this document.

The standards for yeast production and wine production have been added, as of November 2012. These rules are based on the EU Commission Regulation (EC) No 1254/2008 and No 203/2012, respectively. The standards for importers (889.34) are excluded as they do not apply in the context of countries outside of the EU.

Where specific clauses of the original Regulations make reference to institutions, services or technical requirements, either not available, not relevant, or inappropriate to countries outside of the EU, an alternative measure is applied which is intended to be equivalent.

© International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

As the Standard is developed directly from the language of the two European Regulations, the Standard is mostly compliant with those Regulations. Where previously noted alternative measures are applied, the requirement may be considered equivalent.

The Standard is accompanied by the following Annexes:

ANNEX I Fertilisers, soil conditioners and nutrients referred to in 6.4.4;

ANNEX II Plant protection products referred to in 6.5.1

ANNEX III Minimum surface areas indoors and outdoors and other characteristics of housing in

the different species and types of production referred to in 6.7.12;

ANNEX IV Maximum number of animals per hectare referred to in 6.7.6;

ANNEX V Feed materials referred to in 6.7.20;

ANNEX VI Feed additives and certain substances used as in animal nutrition;

ANNEX VII Products for cleaning and disinfection;

ANNEX VIII Certain products and substances for use in production of processed organic food,

including yeast and yeast products food additives and processing aids;

Annex VIIIa Products and substances for use or addition in organic products of the wine sector;

ANNEX IX Definitions, updated with animal aquaculture and seaweed definitions;

ANNEX X Specific Organic Aquaculture production rules;

Compiled for the Accredited Certification Bodies, Brooklyn Park, MN, USA

By James A. Riddle and Joyce E Ford

Ref	Ret	EU ref	Compliance/ Equivalence
1	Aim		Zquivalence
	This Standard provides the basis for the sustainable development of organic production while ensuring the effective functioning of the market, guaranteeing fair competition, ensuring consumer confidence and protecting consumer interests.  It establishes common objectives and principles to support the rules set out under this Standard concerning:  1. all stages of production, preparation and distribution of organic products and their control; and  2. the use of indications referring to organic production in labelling and advertising.	834-Article 1	С
2	Scope		
2.1	This Standard shall apply to the following products originating from agriculture where such products are placed on the EU market or are intended to be placed on the EU market:  1. live or unprocessed agricultural products;  2. processed agricultural products for use as food;  3. feed;  4. aquaculture animal and seaweed products; and  5. vegetative propagating material and seeds for cultivation.  The products of hunting and fishing of wild animals shall not	834-Article 1	Е
	be considered as organic production.		
2.2	This Standard shall apply to any operator involved in activities, at any stage of production, preparation and distribution, relating to the products set out in paragraph 2.1.  However, mass catering operations shall not be subject to this Standard.	834-Article 1	С
2.3	This Standard shall be applied within the framework of relevant national or international law concerning such products, such as provisions governing the production, preparation, marketing, labelling and control, including legislation on foodstuffs and animal nutrition.	834-Article 1	E
3	Objectives for organic production		
	The following objectives and principles in paragraphs 3 and 4 are not standards in themselves but set the framework for the application of all subsequent requirements and shall be used as points of reference when questions of interpretation arise.  Organic production shall pursue the following general objectives:  1. establish a sustainable management system for agriculture that:	834-Article 3	Е
	<ul><li>(a) respects nature's systems and cycles and sustains and enhances the health of soil, water, plants and animals and the balance between them;</li><li>(b) contributes to a high level of biological diversity;</li></ul>		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

(c) makes responsible use of energy and the natural resources, such as water, soil, organic matter and air; (d) respects high animal welfare standards and in particular meets animals' species-specific behavioural needs; 2. aim at producing products of high quality; 3. aim at producing a wide variety of foods and other agricultural products that respond to consumers' demand for goods produced by the use of processes that do not harm the environment, human health, plant health or animal health and welfare.  4 Principles of organic production  4.1 Overall principles  Organic production shall be based on the following principles: 1. the appropriate design and management of biological processes based on ecological systems using natural resources which are internal to the system by methods that: (a) use living organisms and mechanical production methods; (b) practice land-related crop cultivation and livestock production or practice aquaculture which complies with the principle of sustainable exploitation of fisheries; (c) exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products; (d) are based on risk assessment, and the use of precautionary and preventive measures, when appropriate; 2. the restriction of the use of external inputs. Where external	34-Article 4	E
Organic production shall be based on the following principles:  1. the appropriate design and management of biological processes based on ecological systems using natural resources which are internal to the system by methods that:  (a) use living organisms and mechanical production methods; (b) practice land-related crop cultivation and livestock production or practice aquaculture which complies with the principle of sustainable exploitation of fisheries; (c) exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products; (d) are based on risk assessment, and the use of precautionary and preventive measures, when appropriate;	34-Article 4	Е
Organic production shall be based on the following principles:  1. the appropriate design and management of biological processes based on ecological systems using natural resources which are internal to the system by methods that:  (a) use living organisms and mechanical production methods;  (b) practice land-related crop cultivation and livestock production or practice aquaculture which complies with the principle of sustainable exploitation of fisheries;  (c) exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products;  (d) are based on risk assessment, and the use of precautionary and preventive measures, when appropriate;	34-Article 4	E
inputs are required or the appropriate management practices and methods referred to in paragraph (a) do not exist, these shall be limited to:  (a) inputs from organic production; (b) natural or naturally-derived substances; (c) low solubility mineral fertilisers; 3. the strict limitation of the use of chemically synthesised inputs to exceptional cases these being: (a) where the appropriate management practices do not exist; and (b) the external inputs referred to in paragraph (b) are not available on the market; or (c) where the use of external inputs referred to in paragraph (b) contributes to unacceptable environmental impacts; 4. the adaptation, where necessary, and within the framework of this Standard, of the rules of organic production taking account of sanitary status, regional differences in climate and local conditions, stages of development, and specific husbandry practices.		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	In addition to the overall principles set out in paragraph 4.1,		Equivalence
	organic farming shall be based on the following specific		
	principles:		E
	(a) the maintenance and enhancement of soil life and natural	834-Article 5	E
	soil fertility, soil stability and soil biodiversity preventing and		
	combating soil compaction and soil erosion, and the nourishing		
	of plants primarily through the soil ecosystem;		
	(b) the minimisation of the use of non-renewable resources and		
	off-farm inputs;		
	(c) the recycling of wastes and by-products of plant and animal		
	origin as inputs in plant and livestock production;		
	(d) taking account of the local or regional ecological balance		
	when taking production decisions;		
	(e) the maintenance of animal health by encouraging the		
	natural immunological defence of the animal, as well as the		
	selection of appropriate breeds and husbandry practices;		
	(f) the maintenance of plant health by preventative measures,		
	such as the choice of appropriate species and varieties resistant		
	to pests and diseases, appropriate crop rotations, mechanical		
	and physical methods and the protection of natural enemies of		
	* *		
	pests;		
	(g) the practice of site-adapted and land-related livestock		
	production; (b) the observance of a high level of animal welfare respecting		
	(h) the observance of a high level of animal welfare respecting species-specific needs;		
	(i) the production of products of organic livestock from animals		
	that have been raised on organic holdings since birth or		
	hatching and throughout their life;  (j) the choice of breeds having regard to the capacity of animals		
	y		
	to adapt to local conditions, their vitality and their resistance to		
	disease or health problems;		
	(k) the feeding of livestock with organic feed composed of		
	agricultural ingredients from organic farming and of natural		
	non-agricultural substances;		
	(l) the application of animal husbandry practices, which		
	enhance the immune system and strengthen the natural		
	defence against diseases, in particular including regular		
	exercise and access to open air areas and pastureland where		
	appropriate;		
	(m) the exclusion of rearing artificially induced polyploid		
	animals; and		
	(n) the maintenance of the biodiversity of natural aquatic		
	ecosystems, the continuing health of the aquatic environment		
	and the quality of surrounding aquatic and terrestrial		
.3	ecosystems.  Specific principles applicable to processing of organic food		
	In addition to the overall principles set out in paragraph 4.1,		
	the production of processed organic food shall be based on the		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	following specific principles:  1. the production of organic food from organic agricultural	834-Article 6	E
	ingredients, except where an ingredient is not available on the		
	market in organic form;		
	2. the restriction of the use of food additives, of non organic ingredients with mainly technological and sensory functions		
	and of micronutrients and processing aids, so that they are		
	used to a minimum extent and only in case of essential		
	technological need or for particular nutritional purposes;		
	3. the exclusion of substances and processing methods that		
	might be misleading regarding the true nature of the product; 4. the processing of food with care, preferably with the use of		
	biological, mechanical and physical methods.		
4.4	Specific principles applicable to processing of organic feed		
	In addition to the overall principles set out in paragraph 4.1,		
	the production of processed organic feed shall be based on the		
	following specific principles:	834-Article 7	_
	1. the production of organic feed from organic feed materials, except where a feed material is not available on the market in		Е
	organic form;		
	2. the restriction of the use of feed additives and processing		
	aids to a minimum extent and only in case of essential		
	technological or zootechnical needs or for particular nutritional		
	purposes;		
	3. the exclusion of substances and processing methods that might be misleading as to the true nature of the product;		
	4. the processing of feed with care, preferably with the use of		
	biological, mechanical and physical methods.		
4.5	Specific principles applicable to organic aquaculture animal		
	and seaweed production		
	1. The aquatic growing area for organic seaweed and aquaculture animals is of utmost importance for growing both	710-Principles	С
	safe and high quality products with minimal impact on the	(4)-(24)	
	aquatic environment.		
	2. An environmental assessment covering best adaptation to		
	the surrounding environment and mitigation of possible		
	negative effects is required as established in sections 11.2 and		
	11.8.		
	3. The specific soluble medium of water requires organic and non-organic aquaculture production units to be adequately		
	separated.		
	4. The cultivation of seaweed can have a beneficial effect in		
	some respects such as nutrient removal and can facilitate		
	polyculture systems. Care needs to be taken not to over-harvest		
	wild seaweed beds to permit their regeneration and to ensure		
	that production does not cause a significant impact on the state		
	of the aquatic environment.		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	5. Organic aquaculture animal production should ensure that		
	species-specific needs of animals are met. In this regard		
	husbandry practices, management systems and containment		
	systems should satisfy the welfare needs of the animals.		
	Production systems and stocking densities shall meet		
	requirements in section 11.12, 11.13 and in Annex X.		
	6 The overall principles for organic production shall be based		
	on an appropriate design and management of biological		
	processes and ecological systems using natural resources which		
	are internal to the system by methods that, in particular for		
	aquaculture, comply with the principle of sustainable		
	exploitation of fisheries. The biodiversity of natural aquatic		
	ecosystems has to be maintained in organic aquaculture		
	production. These principles are otherwise based on risk		
	assessment, and the use of precautionary and preventive		
	measures, when appropriate. To this end, it should be clarified		
	that artificial induction of the reproduction of aquaculture		
	animals through hormones and hormones derivatives is		
	incompatible with the concept of organic production and		
	consumer perception of organic aquaculture products and that		
	such substances should therefore not be used in organic		
	aquaculture.		
	7. Feed for aquaculture animals should meet the nutritional		
	needs and is also required to meet the health requirement that		
	feed coming from a species is not fed to the same species.		
	8. The raw materials for feeding organic carnivorous fish and		
	crustaceans should be from either organic sources or be		
	derived from sustainable exploitation of fisheries.		
	9. For the purpose of organic aquaculture animal and seaweed		
	production, the use of certain non-organic feed materials, feed		
	additives and processing aids is allowed under well-defined		
	conditions only if they have been authorised for use in organic		
	production and listed in Annex V and Annex VI;		
	10. The cultivation of filter feeding bivalve molluscs can have a		
	beneficial effect on coastal water quality via the removal of		
	nutrients and their use can also facilitate polyculture systems.		
	Specific rules for molluscs are outlined in section 11.20.		
	11. Animal health management should be primarily based on		
	the prevention of disease.		
	12. Certain substances for cleaning, antifouling treatment, and		
	disinfection of production equipment and facilities should be		
	allowed only if they have been authorised for use in organic		
	production under Annex VII, section 2. In the presence of live		
	animals the use of disinfection substances requires particular		
	care and measures to ensure that the application is not harmful.		
	14. Precaution should be taken during the handling and		
	transport of live fish so as to meet their physiological needs.		
	15. The conversion to the organic production method requires		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	the adaptation of all means to the organic method for a given period. Depending on the previous production systems, specific conversion periods are established in accordance with section 6.2.3 and 6.2.6.		
5	Production Rules		
5.1	Compliance with standards		
	Operators shall comply with the production rules set out in the relevant sections 5-10. In order to demonstrate compliance they are obliged to maintain the relevant records described in section 10.	834-Article 8	Е
5.2	Adherence to the control system		
	1. Any operator who produces, prepares, stores, or exports from a third country organic products or who places such products on the market shall, prior to placing on the market of any products as organic or in conversion to organic:	834-Article 28	Е
	(a) submit her/his undertaking to a recognised control body.  2. Where an operator contracts out any of the activities to a third party, that operator shall nonetheless be subject to the requirements referred to in point (a), and the subcontracted		
	activities shall be subject to the control system.		
	3. Where an operator runs several crop production units in the same area the units producing non-organic crops, together with storage premises for farm input products shall also be subject to the general and the specific requirements in paragraphs 5.3,5.4, 5.9.2, 10.2 and the control measures defined in Title IV, Chapter 1 of Regulation (EC) 889/2008.	889-Article 73	Е
	4. Where an operator manages several livestock production units, the units which produce non-organic livestock or livestock products shall also be subject to these Standards and the control system.	889-Article 79	CE
	5. When an operator manages several aquaculture animal production units, the units which produce non-organic aquaculture animals shall also be subject to these Standards and the control system.	889-Article 79d	CE
5.3	Minimum control requirements		
	<ol> <li>When the control arrangements are first implemented, the operator shall draw up and subsequently maintain:</li> <li>(a) a full description of the unit and/or premises and/or activity;</li> </ol>	889-Article 63	E
	<ul><li>(b) all the practical measures to be taken at the level of the unit and/or premises and/or activity to ensure compliance with the organic production rules;</li><li>(c) the precautionary measures to be taken in order to reduce the risk of contamination by unauthorised products or substances and the cleaning measures to be taken in storage places and throughout the operator's production chain.</li></ul>		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	(d) the specific characteristics of the production method used,		-
	where the operator intends to request documentary evidence.		
	Where appropriate, the description and measures provided for		
	in the first subparagraph may be part of a quality system as set up by the operator.		
	2. The description and the measures referred to in paragraph 1 shall be contained in a declaration, signed by the responsible operator. In addition, this declaration shall include an undertaking by the operator:		
	(a) to perform the operations in accordance with the organic production rules;		
	(b) to accept, in the event of infringement or irregularities, the enforcement of the measures of the organic production rules;		
	(c) to undertake to inform in writing the buyers of the product in order to ensure that the indications referring to the organic production method are removed from this production.		
	The operator shall countersign the control body's inspection report that identifies possible deficiencies and non-compliances		
	with these Standards and take the necessary corrective measures.		
	(d) to accept, in cases where the operator and/or the subcontractors of that operator are checked by different control authorities or control bodies in accordance with this Standard		
	or other system equivalent or compliant to Regulation (EC) 834/2007 and Regulation (EC) 889/2008, the exchange of information between those authorities or bodies.		
	(e) to accept, in cases where the operator and/or the subcontractors of that operator change their control authority		
	or control body, the transmission of their control files to the subsequent control authority or control body.		
	(f) to accept, in cases where the operator withdraws from the control system, to inform without delay the relevant competent authority and control authority or control body.		
	(g) to accept, in cases where the operator withdraws from the control system, that the control file is kept for a period of at		
	least five years.  (h) to accept to inform the relevant control authority or authorities or control body or bodies without delay of any		
	authorities or control body or bodies without delay of any irregularity or infringement affecting the organic status of their product or organic products received from other operators or	889-Article 67	С
	subcontractors.  3. With regard to access to facilities the operator shall:		
	a) give the control authority or control body, for control purposes, access to all parts of the unit and all premises, as well as to the accounts and relevant supporting		
	premises, as well as to the accounts and relevant supporting documents;		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	b) provide the control authority or control body with any		1
	information reasonably necessary for the purposes		
	of the control;		
	c) submit, when requested by the control authority or control		
	body, the results of its own quality assurance programmes.		
	In addition to the requirements set out in paragraph 1,		
	importers and first consignees shall submit the		
	information on imported consignments.		
5.4	Specific control requirements for plants and plant products		
	from farm production or collection-control arrangements		_
	1. The full description of the unit referred to in 5.3.1.a shall:		Е
	(a) be drawn up even where the operator limits his activity to the collection of wild plants;	889-Article 70	
	(b) indicate the storage and production premises and land		
	parcels and/or collection areas and, where applicable, premises		
	where certain processing and/or packaging operations take		
	place;		
	(c) specify the date of the last application on the parcels and/or		
	collection areas concerned of products, the use of which is not		
	compatible with the organic production rules.		
	2. In case of collection of wild plants, the practical measures		
	referred to in 5.3.1.b shall include any guarantees given by		
	third parties which the operator can provide to ensure that		
	those areas have not, for a period of at least three years before		
	the collection, received treatment with products other than		
	those authorised for use in organic production listed in Annexes I and II.		
	3. Each year, before the date indicated by the control authority		
	or control body, the operator shall notify the control authority	889 Article 71	
	or control body of its schedule of production of crop products,		С
	giving a breakdown by parcel.		
5.5	Control arrangements for seaweed		
	When the control system applying specifically to seaweed is		С
	first implemented, the full description of the site referred to in	889-Article	
	5.3.1.a shall include:	73a	
	1. a full description of the installations on land and at sea;		
	2. the environmental assessment as outlined in 11.2.3 where		
	applicable;		
	3. the sustainable management plan as outlined in 11.2.4 where		
	applicable;		
	4. for wild seaweed a full description and a map of shore and		
	sea collection areas and land areas where post collection		
	activities take place shall be drawn up.		
5.6	Control arrangements for livestock and livestock products		
	When the control system applying specifically to livestock		
	production is first implemented, the full description of the unit	990 A 74	С
	referred to in 5.3.1.a shall include:	889-Article 74	
	referred to in 0.0.1.a shall include.	<u> </u>	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/
	<ul> <li>(a) a full description of the livestock buildings, pasturage, open air areas, etc., and, where applicable, the premises for the storage, packaging and processing of livestock, livestock products, raw materials and inputs;</li> <li>(b) a full description of the installations for the storage of livestock manure.</li> <li>2. The practical measures referred to in 5.3.1.b shall include:</li> <li>(a) a plan for spreading manure agreed with the control body or authority, together with a full description of the areas given over to crop production;</li> <li>(b) where appropriate, as regards the spreading of manure, the written arrangements with other holdings as referred to in 6.4.4.3 complying with the provisions of the organic production rules;</li> <li>(c) a management plan for the organic-production livestock</li> </ul>		Equivalence
5.7	unit.  Control arrangements for aquaculture animal production		
	When the control system applying specifically to aquaculture animal production is first implemented, the full description of the unit referred to in 5.3.1.a shall include:  1. a full description of the installations on land and at sea;  2. the environmental assessment as outlined in 11.2.3 where applicable;  3. the sustainable management plan as outlined in 11.2.4 where applicable.  4. in the case of molluscs a summary of the special chapter of the sustainable management plan as required by cultivation rules in 11.20.4(2)	889-Article 79a	C
5.8	For bivalve mollusc production, inspection visits shall take place before and during maximum biomass production.	889Article 79c	С
5.9	Prohibition on the use of GMOs		
	1. Genetically modified organisms (GMOs), and products produced from or by GMOs shall not be used as food, feed, processing aids, plant protection products, fertilisers, soil conditioners, seeds, vegetative propagating material, microorganisms, and animals in organic production.  2. For the purpose of the prohibition referred to in paragraph 5.9.1, with regard to products not being food or feed, or products produced by GMOs, operators using such nonorganic products purchased from third parties shall require the vendor to confirm that the products supplied have not been produced from or by GMOs.	834-Article 9 889-Article 69	С
5.10	Prohibition on the use of ionising radiation		
	The use of ionising radiation for the treatment of organic food or feed, or of raw materials used in organic food or feed is prohibited.	834-Article 10	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
6	Farm Production		·
6.1	General farm production rules		
6.2	<ol> <li>The entire agricultural holding shall be managed in compliance with the requirements applicable to organic production.</li> <li>A holding may be split up into clearly separated units or aquaculture production sites which are not all managed under organic production. As regards animals, different species shall be involved. As regards aquaculture the same species may be involved, provided that there is adequate separation between the production sites. As regards plants, different varieties that can be easily differentiated shall be involved.</li> <li>Where not all units of a holding are used for organic production, the operator shall keep the land, animals, and products used for, or produced by, the organic units separate from those used for, or produced by, the non-organic units and keep adequate records to show the separation.</li> </ol>	834-Article 11	С
6.2.1			
6.2.2	1. The following rules shall apply to a farm on which organic production is started:  (a) the conversion period shall start at the earliest when the operator has notified his/her activity to the control body;  (b) during the conversion period all rules established by this Standard shall apply;  (c) conversion periods specific to the type of crop or animal production shall be defined (see paragraphs 6.2.2-6.2.6);  (d) on a holding or unit partly under organic production and partly in conversion to organic production, the operator shall keep the organically produced and in-conversion products separate and the animals separate or readily separable and keep adequate records to show the separation;  (e) in order to determine the conversion period referred to above, a period immediately preceding the date of the start of the conversion period may be taken into account, in so far as certain conditions concur;  (f) animals and animal products produced during the conversion period referred to in subparagraph (c) shall not be marketed with the indications referred to in 9.1 used in the labelling and advertising of products.  Conversion - plants and plant products	834-Article 17	С
6.2.2	1. For plants and plant products to be considered organic, the production rules as referred to in sections 5.9, 5.10, 6.1 and 6.4	889-Article 36	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/
	of this Standard must have been applied on the parcels during		Equivalence
	a conversion period of at least two years before sowing, or, in		
	the case of grassland or perennial forage, at least two years		
	before its use as feed from organic farming, or, in the case of		
	perennial crops other than forage, at least three years before the		
	first harvest of organic products.		
	2. The control body may decide to recognise retroactively as		
	being part of the conversion period any previous period in		
	which:		
	(a) the land parcels were registered in an official environmental		
	protection or similar programme, provided that the measures		
	concerned ensure that products not authorised for organic		
	production have not been used on those parcels, or		
	(b) the parcels were natural or agricultural areas which were		
	not treated with products not authorised for organic		
	production.		
	The period referred to in point 6.2.2.2(b) can be taken into		
	consideration retroactively only where satisfactory proof has		
	been furnished to the control body allowing it to satisfy itself		
	that the conditions were met for a period of at least three years.  3. The control body may decide, in certain cases, where the		
	land had been contaminated with products not authorised for		
	organic production, to extend the conversion period beyond		
	the period referred to in paragraph 1.		
6.2.3	Conversion - seaweed		
	1. The conversion period for a seaweed harvesting site shall be	000 A 11 1	
	six months.	889-Article	С
	2. The conversion period for a seaweed cultivation unit shall be	36a	
	the longer of six months or one full production cycle.		
6.2.4	Conversion - land associated with organic livestock		
	production		
	1. The conversion rules referred to in paragraph 6.2.2 of this	889- Article	
	Standard shall apply to the whole area of the production unit	37	С
	on which animal feed is produced.	37	
	2. Notwithstanding the provisions in paragraph 6.2.4.1, the		
	conversion period may be reduced to one year for pasturages		
	and open air areas used by non-herbivore species. This period		
	may be reduced to six months where the land concerned has		
	not during the last year, received treatments with products not authorised for organic production.		
6.2.5	Conversion – livestock and livestock products		
5.2.5	Where non-organic livestock has been brought onto a		
	holding in accordance with paragraph 6.7.2 of this Standard	889- Article	С
	and if livestock products are to be sold as organic products, the		
	production rules as referred to in this Standard must have been	38	
	applied for at least:		
	(a) 12 months in the case of equidae and bovines, including		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	bubalus and bison species, for meat production, and in any		
	case at least three quarters of their lifetime;		
	(b) six months in the case of small ruminants and pigs and animals for milk production;		
	(c) 10 weeks for poultry for meat production, brought in before		
	they are three days old; (d) six weeks in the case of poultry for egg production.		
	2. Where non-organic animals exist on a holding at the		
	beginning of the conversion period their products may be		
	deemed organic if there is simultaneous conversion of the		
	complete production unit, including livestock, pasturage		
	and/or any land used for animal feed. The total combined		
	conversion period for both existing animals and their offspring,		
	pasturage and/or any land used for animal feed, may be		
	reduced to 24 months, if the animals are mainly fed with		
	products from the production unit.		
6.2.6	Conversion - aquaculture animal production		
	1. The following conversion periods for aquaculture	889-Article	Е
	production units shall apply for the following types of	38a	
	aquaculture facilities including the existing aquaculture animals:		
	(a) for facilities that cannot be drained, cleaned and disinfected,		
	a conversion period of 24 months;		
	(b) for facilities that have been drained, or fallowed, a		
	conversion period of 12 months;		
	(c) for facilities that have been drained, cleaned and disinfected		
	a conversion period of six months;		
	(d) for open water facilities including those farming bivalve		
	molluscs, a three month conversion period.		
	2. The control body may decide to recognise retroactively as		
	being part of the conversion period any previously		
	documented period in which the facilities were not treated or		
	exposed to products not authorised for organic production.		
6.3	Parallel production		
6.3.1	Parallel production - plant production		
	1. Where an operator's holding faces climatic, geographical or	889-Article	Е
	structural constraints, a producer may apply to the control	40.	E
	body to run organic and non-organic production units in the		
	same area:		
	(a) in the case of the production of perennial crops, which		
	require a cultivation period of at least three years, where		
	varieties cannot be easily differentiated, provided the following conditions are met:		
	(i) the production in question forms part of a conversion plan		
	in respect of which the producer gives a firm undertaking and		
	i in respect or writer the producer gives a fifth diluctuating and	Ī	I
	which provides for the beginning of the conversion of the last		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

		EU ref	Compliance/ Equivalence
	possible period which may not in any event exceed a		1
	maximum of five years;		
	(ii) appropriate measures have been taken to ensure the		
	permanent separation of the products obtained from each unit		
	concerned;		
	(iii) the control body is notified of the harvest of each of the		
	products concerned at least 48 hours in advance;		
	(iv) upon completion of the harvest, the producer informs the		
	control body of the exact quantities harvested on the units		
	concerned and of the measures applied to separate the		
	products;		
	(v) the conversion plan has been approved by the control body;		
	this approval shall be confirmed each year after the start of the		
	conversion plan;		
	(b) in the case of areas intended for agricultural research or		
	formal education agreed by the control body and provided the		
	conditions set out in point 6.3.1.1(a)(ii)(iii)(iv) and the relevant		
	part of point (v) are met;		
	(c) in the case of production of seed, vegetative propagating		
	material and transplants and provided the conditions set out in		
	point 6.3.1.1(a)(ii)(iii)(iv) and the relevant part of point (v) are		
	met;		
	(d) in the case of grassland exclusively used for grazing.		
6.3.2	Parallel production – livestock		
	1. Non organic livestock may be present on the holding	889-Article 17	С
	provided they are reared on units where the buildings and		
	parcels are separated clearly from the units producing in		
	accordance with the organic production rules and a different		
	species is involved.		
	2. Non-organic livestock may use organic pasturage for a		
	limited period of time each year, provided that such animals		
	come from a farming system as defined in paragraph 3(b) and		
	that organic animals are not present at the same time on that		
	pasture.		
	pasture. 3. Organic animals may be grazed on common land, providing		
	pasture. 3. Organic animals may be grazed on common land, providing that:		
	pasture. 3. Organic animals may be grazed on common land, providing that: (a) the land has not been treated with products not authorised		
	pasture. 3. Organic animals may be grazed on common land, providing that: (a) the land has not been treated with products not authorised for organic production for at least three years;		
	pasture. 3. Organic animals may be grazed on common land, providing that: (a) the land has not been treated with products not authorised for organic production for at least three years; (b) any non-organic animals which use the land concerned are		
	pasture. 3. Organic animals may be grazed on common land, providing that: (a) the land has not been treated with products not authorised for organic production for at least three years; (b) any non-organic animals which use the land concerned are derived from farming systems that target the sustainable use of		
	pasture. 3. Organic animals may be grazed on common land, providing that: (a) the land has not been treated with products not authorised for organic production for at least three years; (b) any non-organic animals which use the land concerned are derived from farming systems that target the sustainable use of land (eg. farms in disadvantaged areas, environmental

Ref		EU ref	Compliance/
Ref	grazing area to another. The uptake of non-organic feed, in the form of grass and other vegetation on which the animals graze, during this period shall not exceed 10 % of the total feed ration per year. This figure shall be calculated as a percentage of the dry matter of feedingstuffs from agricultural origin.  5. Operators shall keep documentary evidence of the use of provisions referred to in 6.3.2  6. The control body may authorise holdings carrying out agricultural research or formal education to rear organic and non-organic livestock of the same species, where the following conditions are met:  (a) appropriate measures, notified in advance to the control body, have been taken in order to guarantee the permanent separation between livestock, livestock products, manure and feedingstuffs of each of the units;  (b) the producer informs the control body in advance of any delivery or selling of the livestock or livestock products;  (c) the operator informs the control body of the exact quantities produced in the units together with all characteristics permitting the identification of the products and confirms that the measures taken to separate the products have been applied Parallel production – beekeeping  Where an operator holding faces climatic, geographical or	889 – Article 40.2	Compliance/ Equivalence
	structural constraints, and, for the purpose of pollination actions an operator may run organic and non-organic beekeeping units on the same holding, provided that all the requirements of the organic production rules are fulfilled, with the exception of the provisions for the siting of the apiaries. In that case the product cannot be sold as organic.  The operator shall keep documentary evidence of the use of this provision.		C
6.4	Plant production rules		
	In addition to the general farm production rules laid down in paragraph 6.1, the following rules shall apply to organic plant production:	834-Article 12	С
6.4.1	Seeds		
	1. For the production of products other than seed and vegetative propagating material only organically produced seed and propagating material shall be used. To this end, the mother plant in the case of seeds and the parent plant in the case of vegetative propagating material shall have been produced in accordance with the rules laid down in this Standard for at least one generation, or, in the case of perennial crops, two growing seasons;	834-Article 12.1	С
6.4.2	Use of seed or vegetative propagating material not obtained by the organic production method		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	1. Where organic seed or vegetative propagating material is	889-Article 45	E
	not available on the market,		
	(a) seed and vegetative propagating material from a production		
	unit in conversion to organic farming may be used,		
	(b) where point (a) is not applicable, control bodies may		
	authorise the use of non-organic seed or vegetative		
	propagating material if not available from organic production.		
	However, for the use of non-organic seed and seed potatoes the		
	following paragraphs 2 to 9 apply.		
	2. Non-organic seed and seed potatoes may be used, provided		
	that the seed or seed potatoes are not treated with plant		
	protection products, other than those authorised for treatment		
	of seed in accordance with paragraph 6.5.1.1 unless chemical		
	treatment is prescribed in accordance with national		
	requirements for phytosanitary purposes for all varieties of a		
	given species in the area where the seed or seed potatoes are to be used.		
	3. Species for which it is established that organically produced		
	seed or seed potatoes are available in sufficient quantities and		
	for a significant number of varieties may not be subject of		
	authorisations pursuant to paragraph 1(b) above, unless these		
	are justified by one of the purposes referred to in paragraph		
	5(c) below.		
	4. The responsibility for granting the authorisation referred to		
	in paragraph 1(b) may rest with the control body.		
	5. Authorisation to use seed or seed potatoes not obtained by		
	the organic production method may only be granted in the		
	following cases:		
	(a) where no supplier, meaning an operator who markets seed		
	or seed potatoes to other operators, is able to deliver the seed		
	or seed potatoes before sowing or planting in situations where		
	the user has ordered the seed or seed potatoes in reasonable		
	time;		
	(b) where the user is able to demonstrate that the desired		
	variety and none of the registered alternatives of the same		
	species are appropriate and that the authorisation therefore is		
	significant for her/his production;		
	(c) where it is justified for use in research, test in small-scale		
	field trials, or for variety of conservation purposes agreed by		
	the control body.		
	6. The authorisation shall be granted before the sowing of the		
	crop.		
	7. The authorisation shall be granted only to individual users		
	for one season at a time and the control body responsible for		
	the authorisations shall register the quantities of seed or seed		
	potatoes authorised.		
	8. By way of derogation from paragraph 7, the control body		
	may grant to all users a general authorisation:		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	<ul><li>(a) for a given species when and in so far as the condition laid down in paragraph 5(a) is fulfilled;</li><li>(b) for a given variety when and in so far as the conditions laid down in paragraph 5(b) are fulfilled.</li><li>The authorisations referred to in the first subparagraph shall be clearly indicated in records maintained by the control body.</li></ul>		
6.4.3	Soil management and amendments		
	1. Organic plant production shall use tillage and cultivation practices that maintain or increase soil organic matter, enhance soil stability and soil biodiversity, and prevent soil compaction and soil erosion;  2. The fertility and biological activity of the soil shall be maintained and increased by multi-annual crop rotation including legumes and other green manure crops, and by the application of livestock manure or organic material, both preferably composted, from organic production;  3. The use of biodynamic preparations is allowed;  4. In addition, fertilisers and soil conditioners may only be used if they have been authorised for use in organic production by certification body	834-Article 12.1	С
	5. Mineral nitrogen fertilisers shall not be used.		
6.4.4	Resort to fertilisers and soil conditioners		
	1. Where the nutritional needs of plants cannot be met by cultivation practices, crop rotation and the application of organic material (paragraph 6.4.3.1, 6.4.3.2 and 6.4.3.3) only fertilisers and soil conditioners referred to in Annex I of this Standard may be used in organic production and only to the extent necessary. Operators shall keep documentary evidence of the need to use the product.  2. The total amount of livestock manure applied on the holding may not exceed 170 kg of nitrogen per year/hectare of agricultural area used. This limit shall only apply to the use of farmyard manure, dried farmyard manure and dehydrated poultry manure, composted animal excrements, including poultry manure, composted farmyard manure and liquid animal excrements.  3. Organic-production holdings may establish written cooperation agreements exclusively with other holdings and enterprises which comply with the organic production rules, with the intention of spreading surplus manure from organic production. The maximum limit as referred to in paragraph 2, shall be calculated on the basis of all of the organic-production units involved in such cooperation.  4. Appropriate preparations of micro-organisms may be used to improve the overall condition of the soil or the availability of nutrients in the soil or in the crops.  5. For compost activation appropriate plant-based preparations	889-Article 3	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	or preparations of micro-organisms may be used.		Equivalence
6.4.5	Hydroponic production is prohibited.	889-Article 4	С
6.5	Pest prevention and treatment		
	1. The prevention of damage caused by pests, diseases and weeds shall rely primarily on the protection by natural enemies, the choice of species and varieties, crop rotation, cultivation techniques and thermal processes;	834-Article 12.1	Е
(F1	2. In the case of an established threat to a crop, plant protection products may only be used if they have been authorised for use in organic production under Annex II;		
6.5.1	Resort to pest treatments		
	1. Where plants cannot be adequately protected from pests and diseases by the measures mentioned above, only products referred to in Annex II of this Standard may be used in organic production. Operators shall keep documentary evidence of the need to use the product.	889-Article 5	С
	2. For products used in traps and dispensers, except pheromone dispensers, the traps and/or dispensers, shall prevent the substances from being released into the environment and prevent contact between the substances and the crops being cultivated. The traps shall be collected after use and disposed of safely.		
6.5.2	Cleaning and disinfection		
	Products for cleaning and disinfection in plant production shall be used only if they have been authorised for use in organic production in Annex VII.	834-Article 12.1	Е
6.5.3	Contamination		
	All plant production techniques used shall prevent or minimise any contribution to the contamination of the environment.	834-Article 12.1	С
6.5.4	Storage of input products		
	In case of organic plant, seaweed, livestock and aquaculture animal production units, storage of input products other than those authorised under this Standard is prohibited in the production unit.	889-Article 35	Е
6.6.1	Mushroom production		
	For production of mushrooms, substrates may be used, if they are composed only of the following components:  1. farmyard manure and animal excrements:  (a) either from holdings producing according to the organic production method;  (b) or referred to in Annex I, only when the product referred to in point (a) is not available; and when they do not exceed 25 %	889-Article 6	С
	of the weight of total components of the substrate, excluding the covering material and any added water, before composting; 2. products of agricultural origin, other than those referred to		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	in point (1), from holdings producing according to organic production method;		
	<ul><li>3. peat not chemically treated;</li><li>4. wood, not treated with chemical products after felling;</li></ul>		
	5. mineral products referred to in Annex I, water and soil.		
6.6.2	Wild plant collection		
	The collection of wild plants and parts thereof, growing naturally in natural areas, forests and agricultural areas is considered an organic production method provided that:  1. those areas have not, for a period of at least three years before the collection, received treatment with products other than those authorised for use in organic production under	834-Article 12.2	С
	Annex I; 2. the collection does not affect the stability of the natural		
	habitat or the maintenance of the species in the collection area.		
6.7	Livestock production rules		
	1. In addition to the general farm production rules laid down in paragraph 6.1, the following rules shall apply to livestock production:	834-Article 14	
	Identification of livestock The livestock shall be identified permanently using techniques adapted to each species, individually in the case of large mammals and individually or by batch in the case of poultry and small mammals.	889-Article 75	С
6.7.1			
0.7.1	Origin of animals	834-Article 14	C
	With regard to the origin of the animals organic livestock shall be born and raised on organic holdings.	654-Article 14	С
6.7.2	Use of non-organic animals		
	1. For breeding purposes, non-organically raised animals may be brought onto a holding under specific conditions. Such animals and their products may be deemed organic after compliance with the conversion period referred to in 6.2  2. Non-organic animals may be brought onto a holding for	834-Article 14	С
	breeding purposes, only when organic animals are not available in sufficient number and subject to the conditions provided for in paragraphs 3 to 5.  3. Non-organic young mammals, when a herd or flock is constituted for the first time, shall be reared in accordance with the organic production rules immediately after they are weaned. Moreover, the following restrictions shall apply at the date on which the animals enter the herd:  (a) buffalo, calves and foals shall be less than six months old;  (b) lambs and kids shall be less than 60 days old;  (c) piglets shall weigh less than 35 kg.  4. Non-organic adult male and nulliparous female mammals, for the renewal of a herd or flock, shall be reared subsequently in accordance with the organic production rules. Moreover, the	889-Article 9	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/
	number of female mammals is subject to the following restrictions per year:  (a) up to a maximum of 10 % of adult equine or bovine, including bubalus and bison species, livestock and 20 % of the adult porcine, ovine and caprine livestock, as female animals;  (b) for units with less than 10 equine or bovine animals, or with less than five porcine, ovine or caprine animals any renewal as mentioned above shall be limited to a maximum of one animal per year.  5. The percentages referred to in paragraph 4 may be increased up to 40 %, subject to prior authorisation by the control body, in the following special cases:  (a) when a major extension to the farm is undertaken;  (b) when a breed is changed;  (c) when a new livestock specialisation is initiated;  (d) when breeds are in danger of being lost to farming and in		Equivalence
	that case, animals of those breeds must not necessarily be nulliparous.  6. Animals existing on the holding at the beginning of the conversion period and their products may be deemed organic after compliance with the conversion period referred to in 6.2.	834-Article 14	С
6.7.3	Use of non-organic animals		
674	Where organic animals are not available, and with prior authorisation of the control body,  1. when a flock is constituted for the first time, renewed or reconstituted and organically reared poultry are not available in sufficient numbers, non-organically reared poultry may be brought into an organic poultry production unit, provided that the pullets for the production of eggs and poultry for meat production are less than three days old;  2. non-organically reared pullets for egg production of not more than 18 weeks may be brought into an organic livestock unit until 31 December 2021, when organically reared pullets are not available and provided that the relevant provisions related to feeding and disease prevention and treatment are complied with.	889-Article 42	Е
6.7.4	Catastrophic circumstances		
	The control body may authorise on a temporary basis:  1. In the case of high mortality of animals caused by health or catastrophic circumstances, the renewal or reconstitution of the herd or flock with non-organic animals, when organically reared animals are not available and provided that respective conversion periods are applied to the non-organic animals;  2. In the case of high mortality of aquaculture animals caused by: natural disasters, adverse climatic events, sudden water quality and quantity changes for which the operator is not responsible, diseases in aquaculture, failure or destruction of	889-Article 47	Е

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	production facilities for which the operator is not responsible, the renewal or reconstitution of the aquaculture stock with		
	non-organic aquaculture animals, when organically reared animals are not available and provided that at least the latter		
	two thirds of the duration of the production cycle are managed under organic management.		
	Upon approval by the control body, the individual operators		
	shall keep documentary evidence of the use of the above		
	exceptions.		
6.7.5	Husbandry practices and housing conditions		
	1. With regard to husbandry practices and housing conditions: (a) personnel keeping animals shall possess the necessary basic knowledge and skills as regards the health and the welfare needs of the animals;	834-Article 14	С
	<ul><li>(b) husbandry practices, including stocking densities, and housing conditions shall ensure that the developmental, physiological and ethological needs of animals are met;</li><li>(c) the livestock shall have permanent access to open air areas,</li></ul>		
	preferably pasture, whenever weather conditions and the state of the ground allow this unless restrictions and obligations related to the protection of human and animal health are imposed on the basis of relevant national legislation;		E
	(d) the number of livestock shall be limited with a view to minimising overgrazing, poaching of soil, erosion, or pollution caused by animals or by the spreading of their manure; (e) organic livestock shall be kept separate from other livestock. However, grazing of common land by organic animals and of organic land by non-organic animals is permitted under certain restrictive conditions (see 6.3.2);		
	(f) duration of transport of livestock shall be minimised; (g) Loading and unloading of animals shall be carried out without the use of any type of electrical stimulation to coerce the animals. The use of allopathic tranquillisers, prior to or during transport, is prohibited.		С
6.7.6	Stocking density		
	1. The total stocking density shall be such as not to exceed the limit of 170 kg of nitrogen per year/hectare of agricultural area as referred to under 6.4.4.2.	889-Article 15	С
	2. To determine the appropriate density of livestock referred to above, the control body shall set out the livestock units equivalent to the above limit. The figures laid down in Annex IV may be taken as a guideline.		E
6.7.7	Access to open air areas		
	<ol> <li>Open air areas may be partially covered.</li> <li>Herbivores shall have access to pasturage for grazing whenever conditions allow.</li> </ol>	889-Article 14	С
	3. In cases where herbivores have access to pasturage during	1

Ref		EU ref	Compliance/ Equivalence
	the grazing period and where the winter-housing system gives		Equivalence
	freedom of movement to the animals, the obligation to provide		
	open air areas during the winter months may be waived.		
	4. Notwithstanding paragraph 2, bulls over one year old shall		
	have access to pasturage or an open air area.		
	5. Poultry shall have access to an open air area for at least one		
	third of their life.		
	6. Open air areas for poultry shall be mainly covered with		
	vegetation and be provided with protective facilities and		
	permit fowl to have easy access to adequate numbers of		
	drinking and feeding troughs.		
	7. Where poultry are kept indoors due to restrictions or		
	obligations imposed on the basis of national legislation, they		
	shall permanently have access to sufficient quantities of		E
	roughage and suitable material in order to meet their		
	ethological needs.		
6.7.8	Possible exception: Specific management allowance in		
	organic livestock		
	The final fattening phase of adult bovines for meat production	000 4 11 1 46	
	may take place indoors, provided that the indoors period does	889-Article 46	С
	not exceed one fifth of the animal's lifetime and in any case for		
	a maximum period of three months.		
6.7.9	Prohibition of landless livestock production		
	Landless livestock production, by which the operator of the	889-Article 16	_
	livestock does not manage agricultural land and/or has not	009-Article 10	С
	established a written cooperation agreement with another		
	operator as referred to under 6.4.4 is prohibited.		
6.7.10	Possible exception: Tethering of animals		
	1. Tethering or isolation of livestock shall be prohibited, unless	834-Article 14	C
	for individual animals for a limited period of time, and in so far		С
	as this is justified for safety, welfare or veterinary reasons;		
	2. Where the operator holding faces climatic, geographical or		
	structural constraints, control bodies may authorise cattle in	889-Article 39	Е
	small holdings to be tethered if it is not possible to keep the		
	cattle in groups appropriate to their behaviour requirements,	834-Article 14	
	provided they have access to pastures during the grazing period		
	and at least twice a week access to open air areas when grazing	889-Article 18.4	
	is not possible		
6.7.11	Management of animals		
	1. Operations such as attaching elastic bands to the tails of	834-Article	С
	sheep, tail-docking, cutting of teeth, trimming of beaks, and	14.1.(b)	
	dehorning shall not be carried out routinely in organic farming.	17.1.(0)	
	However, some of these operations may be authorised by the		
	control body for reasons of safety or if they are intended to		T.
	improve the health, welfare or hygiene of the livestock on a case-	000 4 :: 1 : 2	Е
	by-case basis.	889-Article 18	
	Any suffering to the animals shall be reduced to a minimum by		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	applying adequate anaesthesia and/or analgesia and by carrying		
	out the operation only at the most appropriate age by qualified		
	personnel.		
	2. Physical castration is allowed in order to maintain the quality		
	of products and traditional production practices but only under		
	the conditions set out in the second subparagraph of 6.7.11.1.		
6.7.12	Rules pertaining to housing conditions		
	1. Insulation, heating and ventilation of the building shall ensure	889-Article 10	С
	that air circulation, dust level, temperature, relative air		
	humidity, and gas concentration are kept within limits which are		
	not harmful to the animals. The building shall permit plentiful		
	natural ventilation and light to enter.		
	2. Housing for livestock shall not be mandatory in areas with		
	appropriate climatic conditions to enable animals to live		
	outdoors.		
	3. The stocking density in buildings shall provide for the		
	comfort, the well being and the species-specific needs of the		
	animals which in particular, shall depend on the species, the		
	breed and the age of the animals. It shall also take account of the		
	behavioural needs of the animals, which depend in particular on		
	the size of the group and the animals' sex. The density shall		
	ensure the animals' welfare by providing them with sufficient		
	space to stand naturally, lie down easily, turn round, groom		
	themselves, assume all natural postures and make all natural		
	movements such as stretching and wing flapping.		
	4. The minimum surface for indoor and outdoor areas and other		
	characteristics of housing for different species and categories of		
	animals are laid down in Annex III.		
.7.13	Specific housing conditions and husbandry practices for		
	mammals		
	1. Livestock housing shall have smooth, but not slippery floors.	889-Article 11	С
	At least half of the indoor surface area as specified in Annex III		
	shall be solid, that is, not of slatted or of grid construction.		
	2. The housing shall be provided with a comfortable, clean and		
	dry laying/rest area of sufficient size, consisting of a solid		
	construction which is not slatted. Ample dry bedding strewn		
	with litter material shall be provided in the rest area. The litter		
	shall comprise straw or other suitable natural material. The litter		
	may be improved and enriched with any mineral product listed		
	in Annex I.		
	3. The housing of calves in individual boxes shall be forbidden		
	after the age of one week.		
	4. Sows shall be kept in groups, except in the last stages of		
	pregnancy and during the suckling period.		
	5. Piglets shall not be kept on flat decks or in piglet cages.		
	6. Exercise areas shall permit dunging and rooting by porcine		
		I	I

	used.		
.7.14	Specific housing conditions and husbandry practices for		
	poultry		
	1. Poultry shall not be kept in cages.	889-Article 12	С
	2. Water fowl shall have access to a stream, pond, lake or a pool		
	whenever the weather and hygienic conditions permit in order		
	to respect their species-specific needs and animal welfare		
	requirements.		
	3. Buildings for all poultry shall meet the following conditions: (a) at least one third of the floor area shall be solid, that is, not		
	of slatted or of grid construction, and covered with a litter		
	material such as straw, wood shavings, sand or turf;		
	(b) in poultry houses for laying hens, a sufficiently large part of		
	the floor area available to the hens shall be available for the		
	collection of bird dropping;		
	(c) they shall have perches of a size and number commensurate		
	with the size of the group and of the birds as laid down in		
	Annex III.		
	(d) they shall have exit/entry pop-holes of a size adequate for		
	the birds, and these pop-holes shall have a combined length of		
	at least 4 m per 100 m2 area of the house available to the birds;		
	(e) each poultry house shall not contain more than:		
	(i) 4800 chickens,		
	(ii) 3000 laying hens,		
	(iii) 5200 guinea fowl,		
	(iv) 4000 female Muscovy or Peking ducks or 3200 male		
	Muscovy or Peking ducks or other ducks,		
	(v) 2500 capons, geese or turkeys;		
	(f) the total usable area of poultry houses for meat production		
	on any single unit, shall not exceed 1600 m <sup>2</sup> ;		
	(g) poultry houses shall be constructed in a manner allowing		
	all birds easy access to open air area.		
	4. Natural light may be supplemented by artificial means to		
	provide a maximum of 16 hours light per day with a		
	continuous nocturnal rest period without artificial light of at least eight hours.		
	5. To prevent the use of intensive rearing methods, poultry		
	shall either be reared until they reach a minimum age or else		
	shall come from slow-growing poultry strains. Where slow-		
	growing poultry strains are not used by the operator the		
	following minimum age at slaughter shall be:		
	(a) 81 days for chickens,		
	(b) 150 days for capons,		
	(c) 49 days for Peking ducks,		
	(d) 70 days for female Muscovy ducks,		
	(e) 84 days for male Muscovy ducks,		
	(f) 92 days for Mallard ducks,		
	(g) 94 days for guinea fowl,		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	(h) 140 days for male turkeys and roasting geese, and		2quivaience
	(i) 100 days for female turkeys.		
	The control body shall define the criteria of slow-growing		
	strains or draw up a list thereof and provide this information to		
	operators.		
6.7.15	Livestock breeding		
	Reproduction shall use natural methods. Artificial	834-Article 14	
	insemination is however allowed;		C
	Reproduction shall not be induced by treatment with		
	hormones or similar substances, unless as a form of veterinary		
	therapeutic treatment in case of an individual animal;		
	3. Other forms of artificial reproduction, such as cloning and		
	_		
	embryo transfer, shall not be used;		
	4. Appropriate breeds shall be chosen. The choice of breeds shall		
	also contribute to the prevention of any suffering and to		
	avoiding the need for the mutilation of animals;		
	5. In the choice of breeds or strains, account shall be taken of the	889-Article 8	С
	capacity of animals to adapt to local conditions, their vitality and		
	their resistance to disease. In addition, breeds or strains of		
	animals shall be selected to avoid specific diseases or health		
	problems associated with some breeds or strains used in		
	intensive production, such as porcine stress syndrome, PSE		
	Syndrome (pale-soft-exudative), sudden death, spontaneous		
	abortion and difficult births requiring caesarean operations.		
	Preference is to be given to indigenous breeds and strains		
.7.16	Feed for livestock		
	1. Primarily obtaining feed for livestock from the holding where	834-Article 14	С
	the animals are kept or from other organic holdings in the same		
	region;		
	2. Livestock shall be fed with organic feed that meets the		
	animal's nutritional requirements at the various stages of its		
	development. A part of the ration may contain feed from		
	holdings which are in conversion to organic farming;		
	3. With the exception of bees, livestock shall have permanent		
	access to pasture or roughage;		
	4. Non-organic feed materials from plant origin, feed materials		
	from animal and mineral origin, feed additives, certain products		
	used in animal nutrition, and processing aids shall be used only		Е
	if they have been authorised for use in organic production under		L
	Annexes V or VI;		
	5. Growth promoters and synthetic amino-acids shall not be		
	used;		
	6. Suckling mammals shall be fed with natural, preferably		C
	maternal, milk.		
.7.17	Feed from own holding or from other organic holdings		
		1	1
	1. In the case of herbivores, except during the period each year	889-Article 19	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	least 60 % of the feed shall come from the farm unit itself or in		Equivalence
	case this is not feasible, be produced in cooperation with other		
	organic farms primarily in the same region.		
	2. In case of pigs and poultry, at least 20 % of the feed shall come		
	from the farm unit itself or in case this is not feasible, be		
	produced in the same region in cooperation with other organic		
	farms or feed business operators.		
6.7.18	Feed meeting animals' nutritional requirements		
	1. All young mammals shall be fed on maternal milk in		
	preference to natural milk, for a minimum period of three	889-Article 20	C
	months for bovines including bubalus and bison species and		
	equidae, 45 days for sheep and goats, and 40 days for pigs.		
	2. Rearing systems for herbivores are to be based on maximum		
	use of grazing pasturage according to the availability of pastures		
	in the different periods of the year. At least 60 % of the dry		
	matter in daily rations of herbivores shall consist of roughage,		
	fresh or dried fodder, or silage. A reduction to 50 % for animals		
	in dairy production for a maximum period of three months in		
	early lactation is allowed.		
	3. Roughage, fresh or dried fodder, or silage shall be added to		
	the daily ration for pigs and poultry.		
	4. The keeping of livestock in conditions, or on a diet, which		
	may encourage anaemia, is prohibited.		
	5. Fattening practices shall be reversible at any stage of the		
	rearing process. Force-feeding is forbidden.		
6.7.19	In-conversion feed		
	1. Up to 30 % of the feed formula of rations on average may		
	comprise in-conversion feedingstuffs. When the in-conversion	889-Article 21	Е
	feedingstuffs come from a unit of the holding itself, this		
	percentage may be increased to 100%.		
	2. Up to 20 % of the total average amount of feedingstuffs fed to		
	the livestock may originate from the grazing or harvesting of		
	permanent pastures or perennial forage parcels or protein crops,		
	sown under organic management on lands in their first year of		
	conversion, provided that they are part of the holding itself and		
	have not been part of an organic production unit of that holding		
	in the last five years. When both in-conversion feedingstuffs and		
	feedingstuffs from parcels in their first year of conversion are		
	being used, the total combined percentage of such feedingstuffs		
	shall not exceed the maximum percentages fixed in paragraph 1.		
	3. The figures in paragraph 1 and 2 shall be calculated annually		
	as a percentage of the dry matter of feedingstuffs of plant origin.		
6.7.20	Use of certain products and substances in feed		
	For the purpose of 6.7.16 only the following substances may be	889-Article 22	
	sued in the processing of organic feed and feeding organic	a- g	С
	animals:		
	1. Non-organic feed materials of plant and animal origin or other

	food materials that are listed in costion 2 of Annay V may be		Equivalence
	feed materials that are listed in section 2 of Annex V may be used subject to the restrictions laid down in 6.7.21 and 6.7.22		
	,		
	below and only if they are produced or prepared without chemical solvents		
	2. Feed materials of mineral origin may be used in organic		
	production if they are listed in Annex V and the restrictions laid		
	down therein are complied with.		
	3. Products from sustainable fisheries may be used to feed		
	organic animals provided that they are produced or prepared		
	without chemical solvents, their use is restricted to non		
	herbivores and the use of fish protein hydrolysate is restricted		
	solely to young animals.		
	4. Feed additives listed in Annex VI and the restrictions laid		
	down therein are complied with may be used.		
	5. Non organic spices, herbs and molasses may be used in		
	organic production provided that their organic form is not		
	available, they are produced or prepared without chemical		
	solvents, their use is limited to 1% of the feed ration of a given		
	species, calculated annually as a percentage of the dry matter of		
	feed from agricultural origin.		
	6. Salt as sea salt or coarse rock salt is permitted.		
	7. Organic feed materials of animal origin.		
6.7.21	Use of non-organic protein feed of plant and animal origin for		
	livestock		
	The use of a limited proportion of nonorganic feed of plant and	889-Article 43	С
	animal origin is allowed for porcine and poultry species where		C
	farmers are unable to obtain feed exclusively from organic		
	production. The maximum percentage of non-organic feed		
	authorised per period of 12 months for those species shall be 5 $\%$		
	for calendar years 2018,2019, 2020 and 2021 . The figures shall be		
	calculated annually as a percentage of the dry matter of feed		
	from agricultural origin. The operator shall keep documentary		
	evidence of the need for the use of this provision.		
6.7.22	Catastrophic circumstances		
	The control body may authorise on a temporary basis: the use of	889-Article 47 c	Е
	non-organic feedingstuffs for a limited period and in relation to	889-Article 47 c	
	a specific area by individual operators, when forage production		
	is lost or when restrictions are imposed, in particular as a result		
	of exceptional meteorological conditions, the outbreak of		
	infectious diseases, the contamination with toxic substances, or		
	as a consequence of fires;		
	Upon approval by the control body, the individual operators		
	shall keep documentary evidence of the use of the above		
	exception. Control bodies shall keep records of the exceptions		
6 7 22	they have granted under this allowance.		
6.7.23	Disease prevention and veterinary treatment		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	Disease prevention shall be based on breed and strain selection, husbandry management practices, high quality feed and exercise, appropriate stocking density, and adequate and appropriate housing maintained in hygienic conditions.	834-Article 14	С
6.7.24	Disease prevention		
	1. The use of chemically synthesised allopathic veterinary medicinal products or antibiotics for preventive treatment is prohibited, without prejudice to 6.7.25  2. The use of substances to promote growth or production (including antibiotics, coccidiostatics and other artificial aids for growth promotion purposes) and the use of hormones or similar substances to control reproduction or for other purposes (e.g. induction or synchronisation of oestrus), is prohibited.  3. Where livestock is obtained from non-organic units, special measures such as screening tests or quarantine periods may apply, depending on local circumstances.  4. Housing, pens, equipment and utensils shall be properly cleaned and disinfected to prevent cross-infection and the buildup of disease carrying organisms. Faeces, urine and uneaten or spilt feed shall be removed as often as necessary to minimise smell and to avoid attracting insects or rodents. For the purpose of cleaning and disinfection (see 6.7.27) only products listed in Annex VII may be used for cleaning and disinfection of livestock buildings, installations, and utensils. Rodenticides (to be used only in traps), and the products listed in Annex II, can be used for the elimination of insects and other pests in buildings and other installations where livestock is kept.  5. Buildings shall be emptied of livestock between each batch of poultry reared. The buildings and fittings shall be cleaned and disinfected during this time. In addition, when the rearing of each batch of poultry has been completed, runs shall be left empty to allow vegetation to grow back. Control bodies shall establish the period for which runs must be empty. The operator shall keep documentary evidence of the application of this period. These requirements shall not apply where poultry is not reared in batches, is not kept in runs, and is free to roam, throughout the day.	889-Article 23	С
6.7.25	Veterinary treatment  1. Discoss shall be treated immediately to avoid suffering to the	834-Article 14	С
	1. Disease shall be treated immediately to avoid suffering to the animal; chemically synthesised allopathic veterinary medicinal products including antibiotics may be used where necessary and under strict conditions, when the use of phytotherapeutic, homeopathic and other products is inappropriate or ineffective. In particular, restrictions with respect to courses of treatment and withdrawal periods shall be defined; 2. The use of immunological veterinary medicines is allowed; 3. Treatments related to the protection of human and animal	654-Atticle 14

Ref		EU ref	Compliance/
	health imposed on the basis of national legislation shall be		Equivalence
	health imposed on the basis of national legislation shall be		
	allowed;	889-Article 24	E
	4. Where, despite preventive measures to ensure animal health		
	(see 6.7.24), animals become sick or injured they shall be treated		
	immediately, if necessary in isolation and in suitable housing.		С
	5. Phytotherapeutic, homeopathic products, trace elements and		
	products listed in Section1 of Annex V and in Section 1.1 of		
	Annex VI, shall be used in preference to chemically-synthesised		
	allopathic veterinary treatment or antibiotics, provided that their		
	therapeutic effect is effective for the species of animal, and the		
	condition for which the treatment is intended.		
	6. If the use of measures referred to in paragraph 4 and 5 is not		
	effective in combating illness or injury, and if treatment is		
	essential to avoid suffering or distress of the animal, chemically		
	synthesised allopathic veterinary medicinal products or		
	antibiotics may be used under the responsibility of a		
	veterinarian.		
	7. With the exception of vaccinations, treatments for parasites		
	and compulsory eradication schemes where an animal or group		
	of animals receive more than three courses of treatments with		
	chemically-synthesised allopathic veterinary medicinal products		
	or antibiotics within 12 months, or more than one course of		
	treatment if their productive life cycle is less than one year, the		
	· · · · · · · · · · · · · · · · · · ·		
	livestock concerned, or produce derived from them, may not be		
	sold as organic products, and the livestock shall undergo the		
	conversion periods set out in 6.2.5. Records of documented		
	evidence of the occurrence of such circumstances shall be kept		
	by the operator for review by the control body.		
	8. The withdrawal period between the last administration of an		
	allopathic veterinary medicinal product to an animal under		
	normal conditions of use, and the production of organically		
	produced foodstuffs from such animals, is to be twice the legal		
	withdrawal period or, in a case in which this period is not		
	specified, 48 hours.		
6.7.26	Storage of allopathic veterinary products		
	The storage of allopathic veterinary medicinal products and	834-Article 35	C
	antibiotics is permitted on holdings provided that they have		С
	been prescribed by a veterinarian in connection with treatment		
	as referred to in 6.7.25.6, that they are stored in a supervised		
	location, and that they are entered in the livestock record as		
	referred to in Section 10 of this Standard, or as appropriate, in		
	the aquaculture production records as referred to in 10.6.		
6.7.27	Cleaning and disinfection		
	With regard to cleaning and disinfection, products for cleaning	834-Article 14	
	and disinfection in livestock buildings and installations, shall be		С
	used only if they have been authorised for use in organic		
	production under Annex VII.

Ref		EU ref	Compliance/ Equivalence
6.8	Beekeeping		
6.8.1	Beekeeping - Ecotypes		
	Preference shall be given to the use of local ecotypes.	889-Article 8	Е
6.8.2	Beekeeping - Conversion		
	1. Beekeeping products can be sold with references to the organic production method only when the organic production rules have been complied with for at least one year.  2. The conversion period for apiaries does not apply in the case of application of 6.8.2.1.2 of this Standard.	889- Article 38	С
	3. During the conversion period the wax shall be replaced with		
	wax coming from organic beekeeping.		
6.8.2.1	Non-organic swarms		
	<ol> <li>Non-organic animals may be brought onto a holding for breeding purposes, only when organic animals are not available in sufficient number.</li> <li>For the renovation of apiaries, 10 % per year of the queen bees and swarms may be replaced by non-organic queen bees and swarms in the organic production unit, provided that the queen bees and swarms are placed in hives with combs or comb</li> </ol>	889-Article 9	С
( 0 2 2	foundations coming from organic production units.		
6.8.2.2	Use of non-organic beeswax		
	In the case of new installations or during the conversion period, non-organic beeswax may be used only:  1. where beeswax from organic beekeeping is not available on the market;  2. where it is proven free of contamination by substances not authorised for organic production; and  3. provided that it comes from the cap	889-Article 44	С
6.8.2.3	Catastrophic circumstances		
	The control body may authorise on a temporary basis in case of high mortality of bees caused by health or catastrophic circumstances, the reconstitution of the apiaries with non-organic bees, when organic apiaries are not available; Upon approval by the control body, the individual operators shall keep documentary evidence of the use of the above exception.	889-Article 47	Е
6.8.3	Beekeeping - Hive location		
	1. Apiaries shall be placed in areas which ensure nectar and pollen sources consisting essentially of organically produced crops or, as appropriate, of spontaneous vegetation or nonorganically managed forests or crops that are only treated with low environmental impact methods. Apiaries shall be kept at sufficient distance from sources that may lead to the contamination of beekeeping products or to the poor health of the bees;	834-Article 14	С
	2. The siting of the apiaries shall be such that, within a radius of 3		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

	km from the apiary site, nectar and pollen sources consist essentially of organically produced crops and/or spontaneous	889-Article 13	Equivalence
	vegetation and/or crops treated with low environmental impact		
	methods <sup>1</sup> which cannot affect the qualification of beekeeping		
	production as being organic. The above mentioned requirements		
	do not apply where flowering is not taking place, or the hives are dormant.		
	3. The control body may designate regions or areas where beekeeping complying with organic production rules is not practicable.		
6.8.4	Beekeeping - Hive materials		
	presenting no risk of contamination to the environment or the	889-Article 13	С
6.8.5	apiculture products.  Beekeeping - Husbandry		
0.0.5	The destruction of bees in the combs as a method associated	834-Article 14	С
	with the harvesting of beekeeping products is prohibited;  2. The bees wax for new foundations shall come from organic production units.		
	3. Without prejudice to 6.8.7, only natural products such as propolis, wax and plant oils can be used in the hives.	889-Article 13	
	4. The use of chemical synthetic repellents is prohibited during honey extractions operations.		
	5. The use of brood combs is prohibited for honey extraction.	889-Article 18.3	
6.8.6	Beekeeping - Feeding		
	sufficient reserves of honey and pollen to survive the winter.	889-Article 19	С
	2. The feeding of bee colonies shall only be permitted where the		
	survival of the hives is endangered due to climatic conditions and		
	only between the last honey harvest and 15 days before the start		
	of the next nectar or honeydew flow period. Feeding shall be with organic honey, organic sugar syrup, or organic sugar.		
6.8.6.1	Catastrophic circumstances		
	The control body may authorise on a temporary basis the	000 4 41 1 47	
	feeding of bees with organic honey, organic sugar or organic sugar syrup in case of long lasting exceptional weather conditions or catastrophic circumstances, which hamper the	889-Article 47	E
	nectar or honeydew production.		

\_

 $<sup>^{1}\,</sup>$  Equivalent to those as described in Article 22 of Council Regulation 1257/1999 (13)

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	Upon approval by the control body, the individual operators		
	shall keep documentary evidence of the use of the above		
	exception.		
6.8.7	Beekeeping – Disease prevention and veterinary treatment		
	1. For the purpose of cleaning and disinfection of frames, hives	889-Article 25	
	and combs, sodium hydroxide may be used.	009-Article 23	С
	For the purposes of protecting frames, hives and combs, in		
	particular from pests, only rodenticides (to be used only in		
	traps), and appropriate products listed in Annex II, are		
	permitted.		
	2. Physical treatments for disinfection of apiaries such as steam		
	or direct flame are permitted.		
	3. The practice of destroying the male brood is permitted only to		
	isolate the infestation of Varroa destructor.		
	4. If, despite all preventive measures, the colonies become sick or		
	infested, they shall be treated immediately and, if necessary, the		Е
	colonies can be placed in isolation apiaries.		
	5. Veterinary medicinal products may be used in organic		
	beekeeping in so far as the corresponding use is authorised		
	under national law.		
	6. Formic acid, lactic acid, acetic acid and oxalic acid as well as		
	menthol, thymol, eucalyptol or camphor may be used in cases of		С
	infestation with Varroa destructor.		
	7. If a treatment is applied with chemically synthesised		
	allopathic products, during such a period, the colonies treated		
	shall be placed in isolation apiaries and all the wax shall be		
	replaced with wax coming from organic beekeeping.		
	Subsequently, the conversion period of one year laid down at		
	6.8.2 will apply to those colonies.		
	8. The requirements laid down in paragraph 7 shall not apply to		
	products listed in paragraph 6.		
7	Production of Processed Food		
7.1	General rules		
	1. The preparation of processed organic food shall be kept	834-Article 19	_
	separate in time or space from non-organic food.		С
	2. Substances and techniques that reconstitute properties that are		
	lost in the processing and storage of organic food, that correct		
	the results of negligence in the processing of these products or		
	that otherwise may be misleading as to the true nature of these		
	products shall not be used.		
7.2	Rules for preserving products and the production of processed feed and food		
	1. Operators preserving products or producing processed feed or		
	food shall establish and update appropriate procedures based on	889-Article	С
	a systematic identification of critical processing steps.	26.1,2	
	The application of these procedures shall guarantee at all times		
	1 11.0 application of these procedures shan guarantee at all times	l	I

	production rules.  2. Operators shall comply with and implement the procedures referred to in paragraph1. In particular, operators shall:  (a) take precautionary measures to avoid the risk of contamination by unauthorised substances or products;  (b) implement suitable cleaning measures, monitor their effectiveness and record those measures;		,
	(c) guarantee that non-organic products are not placed on the market with an indication referring to the organic production method.		
7.3	Split operations		
	1. Further to the provisions laid down in 7.2, when non-organic products are also prepared or stored in the preparation unit concerned, the operator shall:  (a) carry out the operations continuously until the complete run has been dealt with, separated by place or time from similar operations performed on non-organic products;  (b) store organic products, before and after the operations, separate by place or time from non-organic products;  (c) inform the control body or control authority thereof and keep available an updated register of all operations and quantities processed;  (d) take the necessary measures to ensure identification of lots and to avoid mixtures or exchanges with non-organic products;  (e) carry out operations on organic products only after suitable cleaning of the production equipment.  2. Additives, processing aids and other substances and	889-Article 26.3,4	С
	ingredients used for processing feed or food and any processing practice applied, such as smoking, shall respect the principles of good manufacturing practice.		
7.4	Ingredients		
	The following conditions shall apply to the composition of organic processed food with the exception of products of the wine sector for which section 7.4.4 shall apply:  1. the product shall be produced mainly from ingredients of agricultural origin; in order to determine whether a product is produced mainly from ingredients of agricultural origin, added water and cooking salt shall not be taken into account;  2. only additives, processing aids, flavourings, water, salt,	834-Article 19	С
	preparations of micro-organisms and enzymes, minerals, trace elements, vitamins, as well as amino acids and other micronutrients in foodstuffs for particular nutritional uses may be used, and only in so far as they have been authorised for use in organic production in accordance with Annex VIII;  3. non-organic agricultural ingredients may be used only if they have been authorised for use in organic production by the control body. Such authorisation shall only be granted if the		E

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	ingredient in question is not available as organic and the		1
	authorisation shall be reviewed annually (see 7.4.2).		
	4. an organic ingredient shall not be present together with the		
	same ingredient in non-organic form or an ingredient in		С
	conversion;		
	5. food produced from in-conversion crops shall contain only		
	one crop ingredient of agricultural origin.		
7.4.1	Use of certain products and substances in processing of food		
	1. Only the following substances can be used in the processing of	889-Articles <sup>5</sup>	
	organic food with the exception of products from the wine	27 and 27a	С
	sector:		
	(a) substances listed in Annex VIII to this Standard;		
	(b) preparations of micro-organisms and enzymes normally		
	used in food processing; however, enzymes to be used as food		
	additives have to be listed in Annex VIII, ISection A;		
	(c) substances, and products <sup>2</sup> labelled as natural flavouring		
	substances or natural flavouring preparations;		
	(d) colours for stamping meat and eggshells <sup>3</sup> ;		
	(e) drinking water and salt (with sodium chloride or potassium		
	chloride as basic components) generally used in food processing;		
	(f) minerals (trace elements included), vitamins, amino acids,		
	and micronutrients, provided that:		
	(i) their use in food for normal consumption is "directly legally		
	required", in the meaning of being directly required by		
	provision of EU law or provisions of national law compatible		
	with Union law, with the consequence that the food cannot be		
	placed at all on the market as food for normal consumption if		
	those minerals, vitamins, amino acids or micronutrients are not		
	added; or		
	(ii) as regards food placed on the market as having particular		
	characteristics or effects in relation to health or nutrition or in		
	relation to needs of specific groups of consumers;		
	- in products referred to in points (a) and (b) of Article 1(1) of		
	Regulation (EU) No 609/2013 of the European Parliament and of		
	the Council (*), their use is authorised by that Regulation and		
	acts adopted on the basis of Article 11(1) of that Regulation for		
	the products concerned.		

\_

 $<sup>^2</sup>$  As defined in Articles 12.2.(b)(i) and 12.2.(c) of Council Directive 88/388/EEC (14) according to Articles 91.(d) and 2.2. of that Directive.

 $<sup>^3</sup>$  In accordance with, respectively, Article 2(8) and Article 2(9) of European Parliament and Council Directive 94/36/EC (15);

	in sufficient quantity in the country or production in accordance		Equivalence
	with the organic production rules or cannot be imported from		
	other countries;		
	2. The control body has issued formal authorisation which will		
	be reviewed annually. Control bodies shall keep detailed		
	information about the granted authorisations and inform the		
	Commission through EU annual report;		
	3. The authorisation may be withdrawn when evidence suggests		
	that the supply situation has improved.		
7.4.2.1	Addition of non-organic yeast extract		
	The addition of up to 5% non-organic yeast extract or autolysate	889-Article 46a	С
	to the substrate (calculated in dry matter) is allowed for the		
	production of organic yeast, where operators are unable to		
	obtain yeast extract or autolysate from organic production. <sup>6</sup>		
.4.3	Specific provisions for seaweed		
	1. If the final product is fresh seaweed, flushing of freshly	889-Article 29a	C
	harvested seaweed shall use seawater. If the final product is	oos milee 2su	
	dehydrated seaweed, potable water may also be used for		
	flushing. Salt may be used for removal of moisture.		
	2. The use of direct flames which come in direct contact with		
	the seaweed shall be prohibited for drying. If ropes or other		
	equipment are used in the drying process they shall be free of		
	anti-fouling treatments and cleaning or disinfection substances		
	except where a product is listed in Annex VII for this use.		
<b>'.4.4</b>	Specific provisions for wine		
	1. Products of the wine sector shall be produced from organic	889-Article	E
	raw material.	29cand d	
	2. Only products and substances listed in Annex VIIIa can be		
	used for the making of wine sector products, including during		
	the processes and oenological practices, subject to restrictions		
	and conditions laid down in this Standard <sup>7</sup> .		
	3. Products and substances listed in Annex VIIIa of this		
	Standard, shall be derived from organic raw material, if

	geographical area because of severe bacterial attacks or fungal		29arraience
	attacks, which oblige the winemaker to use more sulphur		
	dioxide than in previous years to obtain a comparable final		
	product.		
	2. Upon approval by the control body, the individual operators		
	shall keep documentary evidence of the use of the above		
	exceptions.		
7.4.6	Wine Transitional Period and Sale of Existing Stock		
	1. Stocks of wine produced until 31 July 2012 in accordance with	889-Article	Е
	either Regulation (EEC) No 2092/91 or Regulation (EC) No	95.10a	
	834/2007 may continue to be brought on the market until stocks		
	are exhausted, and subject to the following labelling		
	requirements:		
	a) The "Organic logo of the EU" may be used provided that the		
	wine-making process complies with this IACB standard. <sup>13</sup>		
	b) Operators using "Organic logo of the EU" shall keep recorded		
	evidence for at least 5 years after they have placed the wine		
	produced from organic grapes on the market, including		
	quantities of wine in litres, per wine category and per year.		
	b) Where documentary evidence is not available, such wine may		
	be labelled as "wine made from organic grapes", provided that		
	it complies with this Standard.		
	c) Wine labelled as "wine made from organic grapes" cannot		
	bear the "Organic logo of the EU."		
7.4.7	Specific provisions for yeast production		
	For the production of organic yeast only organically produced	834-Article 20	С
	substrates shall be used.		
	Organic yeast shall not be present in organic food or feed		
	together with non-organic yeast.		
	With regard to the production of organic yeast <sup>14</sup> , the following		
	substances may be used in the production, confection and		
	formulation of yeast:		
	(1) substances listed in Annex VIII, Section C;		
	(2) products and substances referred to in 7.4.1.1(b) and (e)		
	above;		
7.5	Collection, packaging, transport and storage of products		
7.5.1	Collection of products and transport to preparation units		

 $<sup>^{13}</sup>$  The ACB standard is in compliance with Chapter 3a of Title II of Regulations (EC) No 834/2007 and 889/2008.

<sup>&</sup>lt;sup>14</sup> See Article 20(1) of Regulation (EC) No 834/2007;

Ref		EU ref	Compliance/ Equivalence
	Operators may carry out simultaneous collection of organic and non-organic products, only where appropriate measures are taken to prevent any possible mixture or exchange with nonorganic products and to ensure the identification of the organic products. The operator shall keep the information relating to collection days, hours, circuit and date and time of reception of the products available to the control body.	889-Article 30	С
7.5.2	Packaging and transport of products to other operators or units		
	1. Operators shall ensure that organic products are transported to other units, including wholesalers and retailers, only in appropriate packaging, containers or vehicles closed in such a manner that substitution of the content cannot be achieved without manipulation or damage of the seal and provided with a label stating, without prejudice to any other indications required by law:  (a) the name and address of the operator and, where different, of the owner or seller of the product;  (b) the name of the product or a description of the compound feedingstuff accompanied by a reference to the organic production method;  (c) the name and/or the code number of the control body to which the operator is subject; and  (d) where relevant, the lot identification mark according to a marking system either approved at national level or agreed with the control body and which permits to link the lot with the accounts referred to in Section 10.  The information referred to in points (a) to (d) of the first subparagraph may also be presented on an accompanying document, if such a document can be undeniably linked with the packaging, container or vehicular transport of the product. This accompanying document shall include information on the supplier and/or the transporter.  2. The closing of packaging, containers or vehicles shall not be required where:  (a) transportation is direct between an operator and another operator who are both subject to the organic control system, and (b) the products are accompanied by a document giving the information requiredunder paragraph 1, and  (c) both the expediting and the receiving operators shall keep documentary records of such transport operations.	889-Article 31	C
7.5.3	Reception of products from other units and other operators		
	On receipt of an organic product, the operator shall check the closing of the packaging or container where it is required and the presence of the indications provided to in 7.5.2.1.  The operator shall crosscheck the information on the label referred to in 7.5.2.1 with the information on the accompanying	889-Article 33	С

Ref		EU ref	Compliance/ Equivalence
	documents. The result of these verifications shall be explicitly mentioned in the documentary accounts referred to in Section 10 of this Standard.  2. The operator shall verify the documentary evidence of his/her		
	suppliers.	889-Article 29	
7.5.4	Storage of products		
	1. For the storage of products, areas shall be managed in such a way as to ensure identification of lots and to avoid any mixing with or contamination by products and/or substances not in compliance with the organic production rules. Organic products shall be clearly identifiable at all times.  2. Where operators handle both non-organic products and organic products, including organic plant, seaweed, livestock and aquaculture animals, and the latter are stored in storage facilities in which also other agricultural products or foodstuffs are stored:  (a) the organic products shall be kept separate from the other agricultural products and/or foodstuffs;  (b) every measure shall be taken to ensure identification of consignments and to avoid mixtures or exchangeswith nonorganic products;  (c) suitable cleaning measures, the effectiveness of which has been checked, have been carried out before the storage of organic products; operators shall record these operations.  (d) The storage of allopathic veterinary medicinal products and antibiotics is permitted on holdings provided that they have been prescribed by a veterinarian in connection with treatment as referred to in 6.7.25.6 or 11.7.1.f.ii, provided that they are stored in a supervised location and that they are entered in the livestock record as referred to in Section 10 of this Standard, or as appropriate, in the aquaculture production records as referred to in 10.6.	889-Article 35	С
8	Production of Processed Feed		
8.1	General rules		
	<ol> <li>Production of processed organic feed shall be kept separate in time or space from production of processed non-organic feed.</li> <li>Organic feed materials, or feed materials from production in conversion, shall not enter simultaneously with the same feed</li> </ol>	834-Article 18	С
	materials produced by non-organic means into the composition of the organic feed product.  3. Any feed materials used or processed in organic production shall not have been processed with the aid of chemically synthesised solvents.  4. Substances and techniques that reconstitute properties that are lost in the processing and storage of organic feed, that correct	889-Article 22	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	the results of negligence in the processing or that otherwise may be misleading as to the true nature of these products shall not be used.		
8.2	Transporting animal feed to other production/preparation		
	units or storage premises		
	In addition to the provisions of 7.5.2, when transporting feed to other production or preparation units or storage premises, operators shall ensure that the following conditions are met:  1. during transport, organically-produced feed, in-conversion feed, and non-organic feed shall be effectively physically separated;  2. the vehicles and/or containers which have transported nonorganic products are used to transport organic products provided that:  (a) suitable cleaning measures, the effectiveness of which has been checked, have been carried out before commencing the transport of organic products; operators shall record these operations,  (b) all appropriate measures are implemented, depending on the risks to organic integrity and, where necessary, operators shall guarantee that non-organic products cannot be placed on the market with an indication referring to organic production, and (c) the operator shall keep documentary records of such transport operations available for the control body;  3. the transport of finished organic feed shall be separated physically or in time from the transport of other finished products;  4. during transport, the quantity of products at the start and each individual quantity delivered in the course of a delivery round shall be recorded.	889-Article 32	С
9	Labelling		
9.1	Use of terms referring to organic production		
	1. For the purposes of this Standard a product shall be regarded as bearing terms referring to the organic production method where, in the labelling, advertising material or commercial documents, such a product, its ingredients or feed materials are described in terms suggesting to the purchaser that the product, its ingredients or feed materials have been obtained in accordance with the rules laid down in this Standard. In the labelling and advertising of live or unprocessed agricultural products, terms referring to the organic production method may be used only where, in addition, all the ingredients of that product have also been produced in accordance with the requirements laid down in this Standard.  2. Labelling as referred to in paragraph 1 shall not be used for a	834-Article 23	Е

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	product for which it has to be indicated in the labelling or advertising that it contains GMOs, consists of GMOs, or is produced from GMOs.  3. As regards processed food, the labelling referred to in paragraph 1 may be used: (a) in the sales description, provided that: (i) the processed food complies with 7.1.1, 7.4.1a,b &d (ii) at least 95 % by weight, of its ingredients of agricultural origin are organic; (b) only in the list of ingredients, provided that the food complies with 7.4; (c) in the list of ingredients and in the same visual field as the sales description, provided that: (i) the main ingredient is a product of hunting and fishing (ii) it contains other ingredients of agricultural origin that are all organic; (iii) the food complies with 7.1.1, 7.4.1a,b &d. The list of ingredients shall indicate which ingredients are organic. In the case where points (b) and (c) of this paragraph apply, the references to the organic production method may only appear in relation to the organic ingredients and the list of ingredients shall include an indication of the total percentage of organic ingredients in proportion to the total quantity of ingredients of agricultural origin.		
	The terms and the indication of percentage referred to in the previous subparagraph shall appear in the same colour, identical size and style of lettering as the other indications in the list of ingredients.		
.2	Compulsory indications		
	1. Where terms in line with 9.1 are used: (a) the code number of the control body to which the operator who has carried out the most recent production or preparation operation is subject, shall also appear in the labelling and shall be placed in the same visual field as the Organic logo of the EU, where the Organic logo of the EU is used in the labelling.  Note: For the model, refer to the following link https://ec.europa.eu/agriculture/organic/downloads/logo_en Contact your control body for the appropriate code number; (b) from July 2010 as regards pre-packaged food the organic logo of the EU may also appear on the packaging; (c) from July 2010 where the organic logo of the EU is used, an indication of the place where the agricultural raw materials of which the product is composed have been farmed, shall also appear in the same visual field as the logo and shall take on"of the following forms, as appropriate: "non-EU Agriculture", where the agricultural raw material has	834-Article 244	Е

Ref		EU ref	Compliance/ Equivalence
	"EU/non-EU Agriculture", where part of the agricultural raw		•
	materials has been farmed in the European Union and a part of		
	it has been farmed in a third country.		
	The above mentioned may be replaced or supplemented by a		
	country in the case where all agricultural raw materials of which		
	the product is composed have been farmed in that country.		
	For the above mentioned indication, small quantities by weight		
	of ingredients may be disregarded provided that the total		
	quantity of the disregarded ingredients does not exceed 2 % of		
	the total quantity by weight of raw materials of agricultural		
	origin.		
	The above mentioned indication shall not appear in a colour,		
	size and style of lettering more prominent than the sales		
	description of the product.		
	2. The indications referred to in paragraph 1 shall be marked in a		
	conspicuous place in such a way as to be easily visible, clearly		
	legible and indelible.		
9.3	Organic production logos		
	1. From July 2010 the EU organic production logo may be used		
	in the labelling, presentation and advertising of products which	834-Article 25	С
	satisfy the requirements set out under this Standard.		_
	The EU logo shall not be used in the case of in-conversion		
	products and food as referred to in 9.1.3 (b) and (c).		
	2. National and private logos may be used in the labelling,		
	presentation and advertising of products which satisfy the		
	requirements set out under this Standard.

	2. Subject to the requirements laid down in points (a) and (b) of		
	paragraph 1, the following statement is permitted in the case of		
	products comprising variable quantities of feed materials from		
	the organic production method and/or feed materials from		
	products in conversion to organic farming and/or non-organic		
	materials: 'may be used in organic production in accordance		
	with Regulations (EC) 834/2007 and (EC) 889/2008'.		
9.4.3	Conditions for the use of indications on processed feed		
	1. The indication provided for at 9.4.2 shall be:	889-Article 61	
	(a) separate from the wording describing the product and the	00) Tittlele 01	С
	manufacturer <sup>15</sup> ;		
	(b) presented in a colour, format or character font that does not		
	draw more attention to it than to the description or name of the		
	animal feedingstuff referred to in (a) above;		
	(c) accompanied, in the same field of vision, by an indication by		
	weight of dry matter referring:		
	(i) to the percentage of feed material(s) from the organic		
	production method;		
	(ii) to the percentage of feed material(s) from products in		
	conversion to organic farming;		
	(iii) to the percentage of feed material(s) not covered by points		
	(i) and (ii);		
	(iv) to the total percentage of animal feed of agricultural origin;		
	(d) accompanied by a list of names of feed materials from the		
	organic production method;		
	(e) accompanied by a list of names of feed materials from		
	products in conversion to organic production.		
	2. The indication provided for in 9.4.2 may be also accompanied		
	by a reference to the requirement to use the feedingstuffs in		
	accordance with the requirements for in-conversion feed (6.7.19)		
	and for the use of certain products and substances in feed		
	(6.7.20).		
9.5	Other specific labelling requirements		
9.5.1	In-conversion products of plant origin		
	In-conversion products of plant origin may bear the indication		
	'product under conversion to organic farming' provided that:	889-Article 62	С
	1. a conversion period of at least 12 months before the harvest		
	has been complied with;		
	2. the indication shall appear in a colour, size and style of		
	lettering which is not more prominent than the sales description		
	of the product, the entire indication shall have the same size of letters;		
	· ·		
	3. the product contains only one crop ingredient of agricultural	<u> </u>	

As referred to in Article 5 of Council Directive 79/373/EEC (19) or in Article 51. of Council Directive 96/25/EC (20);

	origin; 4. the indication is linked to the code number of the control body referred to at 9.2.		
10	Record keeping responsibilities of operators		
10.1	General		
	1. Stock and financial records shall be kept in the unit or premises and shall enable the operator to identify and the control body to verify:  (a) the supplier and, where different, the seller, or the exporter of the products;  (b) the nature and the quantities of organic products delivered to the unit and, where relevant, of all materials bought and the use of such materials, and, where relevant, the composition of the compound feedingstuffs;  (c) the nature and the quantities of organic products held in storage at the premises;  (d) the nature, the quantities and the consignees and, where different, the buyers, other than the final consumers, of any products which have left the unit or the first consignee's premises or storage facilities;  (e) in case of operators who do not store or physically handle such organic products, the nature and the quantities of organic products bought and sold, and the suppliers, and where different, the sellers or the exporters and the buyers, and where different, the consignees.  2. The documentary accounts shall also comprise the results of the verification at reception of organic products and any other information required by the control body for the purpose of proper control. The data in the accounts shall be documented with appropriate justification documents. The accounts shall demonstrate the balance between the input and the output.  3. Where an operator runs several production units in the same area, the units for non-organic products, together with storage premises for input products must also be subject to the minimum control requirements.	889-Article 66	C
10.2	Plant production records		
	Plant production records shall be compiled in the form of a register and kept available to the control bodies at all times at the premises of the holding. In addition to 10.1, such records shall provide at least the following information:  1. as regards the use of fertiliser: date of application, type and amount of fertiliser, parcels concerned;  2. as regards the use of plant protection products: reason and date of treatment, type of product, method of treatment;  3. as regards purchase of farm inputs: date, type and amount of purchased product;  4. as regards harvest: date, type and amount of organic or in	889-Article 72	С

	conversion crop production.		Equivalence
10.3			
10.3	1. Seaweed production records shall be compiled in the form of a register by the operator and kept available for the control authorities or control bodies at all times at the premises of the holding. It shall provide at least the following information: (a) list of species, date and quantity harvested; (b) date of application, type and amount of fertiliser used. 2. For collection of wild seaweed the register shall also contain: (a) history of harvesting activity for each species in named beds; (b) harvest estimate (volumes) per season; (c) sources of possible pollution for harvest beds; (d) sustainable annual yield for each bed.  Livestock records	889-Article 73b	c
	Livestock records shall be compiled in the form of a register and kept available to the control bodies at all times at the premises of the holding. Such records shall provide a full description of the herd or flock management system comprising at least the following information:  1. as regards animals arriving at the holding: origin and date of arrival, conversion period, identification mark and veterinary record;  2. as regards livestock leaving the holding: age, number of heads, weight in case of slaughter, identification mark and destination;  3. details of any animals lost and reasons thereof;  4. as regards feed: type, including feed supplements, proportions of various ingredients of rations and periods of access to free-range areas, periods of transhumance where restrictions apply;  5. as regards disease prevention and treatment and veterinary care: date of treatment, details of the diagnosis, the posology; type of treatment product, the indication of the active pharmacological substances involved method of treatment and veterinary prescription for veterinary care with reasons and withdrawal periods applying before livestock products can be marketed labelled as organic.	889-Article 76	С
10.5	Records of veterinary medicinal products for livestock		
	Whenever veterinary medicinal products are used, the information according to 10.4.5 is to be declared to the control body before the livestock or livestock products are marketed as organically produced. Livestock treated shall be clearly identified, individually in the case of large animals; individually, or by batch, or by hive, in the case of poultry, small animals and bees.	889-Article 77	С
10.6	Aquaculture animal production records		
	The following information shall be provided by the operator in	889-79b	c

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	the form of a register which shall be kept up to date and made available for the control authorities or control bodies at all times at the premises of the holding (a) the origin, date of arrival and conversion period of animals		
	arriving at the holding: (b) the number of lots, the age, weight and destination of animals leaving the holding;		
	(c) records of escapes of fish; (d) for fish the type and quantity of feed and in the case of carp and related species a documentary record of the use additional feed;		
	(e) veterinary treatments giving details of the purpose, date of application, method of application, type of product and withdrawal period;		
	(f) disease prevention measures giving details of fallowing, cleaning and water treatment.		
10.7	Specific record requirements on beekeeping		
	1. A map on an appropriate scale listing the location of hives shall be provided to the control body by the beekeeper. Where no areas are identified in accordance with this standard section 11.1, the beekeeper shall provide the control body with appropriate documentation and evidence, including suitable analyses if necessary, that the areas accessible to his colonies meet the conditions required in this standard.	889-Article 78	С
	2. The following information shall be entered in the register of the apiary with regard to the use of feeding: type of product, dates, quantities and hives where it is used.  3. Whenever veterinary medicinal products are to be used, the type of product, including the indication of the active pharmacological substance, together with details of the diagnosis, the posology, the method of administration, the duration of the treatment and the legal withdrawal period shall be recorded clearly and declared to the control body before the products are marketed as organically produced.  4. The zone where the apiary is situated shall be registered together with the identification of the hives. The control body shall be informed of the moving of apiaries by a deadline agreed on with the control body.  5. Particular care shall be taken to ensure adequate extraction, processing and storage of beekeeping products. All the measures to comply with this requirement shall be recorded.  6. The removals of the supers and the honey extraction operations shall be entered in the register of the apiary.		
10.8	Units processing animal feed		
	For the purposes of proper control of the operations, the documentary accounts referred to in 10.1 shall include	889-Article 89	С

	information on the origin, nature and quantities of feed materials, additives, sales and finished products.		
11	Organic seaweed and aquaculture animal production		
11.1	Production rules for seaweed		
	1. The collection of wild seaweeds, naturally growing in the sea, is considered as an organic production method if:  (a) the growing areas are of high ecological quality, <sup>16</sup> and are not unsuitable from a health point of view.  (b) the collection does not affect the long term stability of the natural habitat or the maintenance of the species in the collection area.  2. The farming of seaweeds shall take place in coastal areas with environmental and health characteristics at least equivalent to those outlined in paragraph 1 in order to be considered organic. In addition:  (a) sustainable practices shall be used in all stages of production, from collection of juvenile seaweed to harvesting;  (b) to ensure that a wide gene-pool is maintained, the collection of juvenile seaweed in the wild should take placeon a regular basis to supplement indoor culture stock;  (c) fertilisers shall not be used except in indoor facilities and only	834-Article 13	Е
	if they have been authorised for use in organic production for		
	this purpose under Annex I;		
11.2	Suitability of aquatic medium and sustainable management		
	1. Operations shall be situated in locations that are not subject to contamination by products or substances not authorised for organic production, or pollutants that would compromise the organic nature of the products.  2. Organic and non-organic production units shall be separated adequately. Such separation measures shall be based on the natural situation, separate water distribution systems, distances, the tidal flow, the upstream and the downstream location of the organic production unit.  3. An environmental assessment proportionate to the production unit shall be required for all new operations applying for	889-Article 6b	С
	organic production and producing more than 20 tonnes of aquaculture products per year to ascertain the conditions of the production unit and its immediate environment and likely		

As defined by Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000, establishing a framework for Community action in the field of water policy, and a quality equivalent to designated waters under Directive 2006/113/EC of the European Parliament and of the Council of 12 December 2006 on the quality required of shellfish waters,

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	effects of its operation. The operator shall provide the		•
	environmental assessment <sup>17</sup> to the control body. If the unit has		
	already been subject to an equivalent assessment, then its use		
	shall be permitted for this purpose.		
	4. The operator shall provide a sustainable management plan		
	proportionate to the production unit for aquaculture and		
	seaweed harvesting The plan shall be updated annually and		
	shall detail the environmental effects of the operation, the		
	environmental monitoring to be undertaken, and list measures		
	to be taken to minimise negative impacts on the surrounding		
	aquatic and terrestrial environments, including, where		
	applicable, nutrient discharge into the environment per		
	production cycle or per annum. The plan shall record the		
	surveillance and repair of technical equipment.		
	5. Aquaculture and seaweed business operators shall by		
	preference use renewable energy sources and re-cycle materials		
	and shall draw up as part of the sustainable management plan a		
	waste reduction schedule to be put in place at the		
	commencement of operations. Where possible, the use of		
	residual heat shall be limited to energy from renewable sources.		
	6. For seaweed harvesting a once-off biomass estimate shall be		
	undertaken at the outset.		
11.3	Sustainable harvesting of wild seaweed		
	1. Documentary accounts shall be maintained in the unit or	889-Article 6c	E
	premises and shall enable the operator to identify and the		E
	control authority or control body to verify that the harvesters		
	have supplied only wild seaweed produced in accordance with		
	this organic standard.		С
	2. Harvesting shall be carried out in such a way that the amounts		
	harvested do not cause a significant impact on the state of the		
	aquatic environment. Measures shall be taken to ensure that		
	seaweed can regenerate, such as harvest technique, minimum		_
	sizes, ages, reproductive cycles or size of remaining seaweed.		Е
	3. If seaweed is harvested from a shared or common harvest		
	area, documentary evidence shall be available that the total		
	harvest complies with this organic standard.		С
	4. With respect to 10.3.1.b and 10.3.1.c, these records must		
	provide evidence of sustainable management and of no long-		
	term impact on the harvesting areas.		
	Seaweed cultivation		
11.4			
11.4	1. Seaweed culture at sea shall only utilise nutrients naturally	889-Article 6d	
11.4	1. Seaweed culture at sea shall only utilise nutrients naturally occurring in the environment, or from organic aquaculture	889-Article 6d	С

 $<sup>^{17}</sup>$  The content of the environmental assessment shall be based on Annex IV to Council Directive 85/337/EEC (\*).

			Equivalence
	polyculture system.		
	2. In facilities on land where external nutrient sources are used		
	the nutrient levels in the effluent water shall be verifiably the		
	same, or lower, than the inflowing water. Only nutrients of plant		
	or mineral origin and as listed in Annex I may be used.		
	3. Culture density or operational intensity shall be recorded and		
	shall maintain the integrity of the aquatic environment by		
	ensuring that the maximum quantity of seaweed which can be		
	supported without negative effects on the environment is not		
	exceeded.		
	4. Ropes and other equipment used for growing seaweed shall		
	be re-used or recycled where possible.		
11.5	Antifouling measures and cleaning of production equipment and facilities		
	1. Bio-fouling organisms shall be removed only by physical		
	means or by hand and where appropriate returned to the sea at	889-Article 6e	С
	a distance from the farm.		
	2. Cleaning of equipment and facilities shall be carried out by		
	physical or mechanical measures. Where this is not satisfactory		
	only substances as listed in Annex VII, Section 2 may be used.		
11.6	Seaweed processing		
11.0	If the final product is fresh seaweed, flushing of freshly		С
	harvested seaweed shall use seawater. If the final product is	889-Article 29a	
	dehydrated seaweed, potable water may also be used for		
	flushing. Salt may be used for removal of moisture.		
	2. The use of direct flames which come in direct contact with the		
	seaweed shall be prohibited for drying. If ropes or other		
	equipment are used in the drying process they shall be free of		
	anti-fouling treatments and cleaning or disinfection substances		
	except where a product is listed in Annex VII for this use.		
11.7	Aquaculture animal production 18		
	1. In addition to the general farm production rules laid down in	834-Article 15	
	Section 6.1 of this Standard, the following rules shall apply to	054-Article 15	С
	aquaculture animal production:		
	(a) with regard to the origin of the aquaculture animals:		
	(i) organic aquaculture shall be based on the rearing of young		
	stock originating from organic broodstock and organic holdings;		
	(ii) when young stock from organic broodstock or holdings are		
	not available, non-organically produced animals may be brought		
	onto a holding under specific conditions;		
	(b) with regard to husbandry practices:		
	(i) personnel keeping animals shall possess the necessary basic		
	knowledge and skills as regards the health and the welfare		

\_

<sup>&</sup>lt;sup>18</sup> This section applies *mutatis mutandis* to zooplankton, micro-crustaceans, rotifers, worms and other aquatic feed animals.

	needs of the animals;		Equivalence
	(ii) husbandry practices, including feeding, design of		
	installations, stocking densities and water quality shall ensure		
	that the developmental, physiological and behavioural needs of		
	animals are met;		
	(iii) husbandry practices shall minimise negative environmental		
	impact from the holding, including the escape of farmed stock;		
	(iv) organic animals shall be kept separate from other		
	aquaculture animals;		
	(v) transport shall ensure that the welfare of animals is		
	maintained;		
	(vi) any suffering of the animals including the time of		
	slaughtering shall be kept to a minimum;		
	(c) with regard to breeding:		
	(i) artificial induction of polyploidy, artificial hybridisation,		
	cloning and production of monosex strains, except by hand		
	sorting, shall not be used;		
	(ii) the appropriate strains shall be chosen;		
	(iii) species-specific conditions for broodstock management,		
	breeding and juvenile production shall be established;		
	(d) with regard to feed for fish and crustaceans:		
	(i) animals shall be fed with feed that meets the animal's		
	nutritional requirements at the various stages of its		
	development;		
	(ii) the plant fraction of feed shall originate from organic		
	production and the feed fraction derived from aquatic animals		
	shall originate from sustainable exploitation of fisheries;		
	(iii) in the case of non-organic feed materials from plant origin,		
	feed materials from animal and mineral origin, feed additives,		
	certain products used in animal nutrition and processing aids		
	shall be used only if they have been authorised for use in		
	organic production and listed in Annex V and Annex VI;		
	(iv) growth promoters and synthetic amino-acids shall not be		
	used;		
	(e) with regard to bivalve molluscs and other species which are		
	not fed by man but feed on natural plankton:		
	(i) such filter-feeding animals shall receive all their nutritional		
	requirements from nature except in the case of juveniles reared		
	in hatcheries and nurseries;		
	(ii) they shall be grown in waters which meet the criteria for		
	Class A or Class B areas as defined in Annex II of Regulation		
	(EC) No 854/2004 and found Annex II of this regulation.		
	(iii) the growing areas shall be of high ecological quality as		
	defined by Directive 2000/60/EC and Annex V and, pending its		
	implementation of a quality equivalent to designated waters		
	under Directive 2006/113/EC (for shellfish waters only);		
	(f) with regard to disease prevention and veterinary treatment:		
	(i) disease prevention shall be based on keeping the animals in

	on the same holding provided 11.2.2 of this Standard is		
	complied with and where different production phases and		
	different handling periods of the aquaculture animals are		
	involved.		
	3. Operators shall keep documentary evidence of the use of		
44.40	provisions referred to in this paragraph.		
11.10	Origin of aquaculture animals		
	1. Locally grown species shall be used and breeding shall aim to	889-Article	
	give strains which are more adapted to farming conditions, good	25d.1	С
	health and good utilisation of feed resources. Documentary	204.1	
	evidence of their origin and treatment shall be provided for the		
	control body.		
	2. Species shall be chosen which can be farmed without causing		
	significant damage to wild stocks.		
11.11	Origin and management of non-organic aquaculture animals		
	1. For breeding purposes or for improving genetic stock and	889-Article 25e	
	when organic aquaculture animals are not available, wild caught	889-Article 25e	С
	or non-organic aquaculture animals may be brought into a		
	holding. Such animals shall be kept under organic management		
	for at least three months before they may be used for breeding.		
	2. When organic aquaculture juvenile animals are not available		
	non-organic aquaculture juveniles may be brought into a		
	holding. At least the latter two thirds of the duration of the		
	production cycle shall be managed under organic management.		
	3. The maximum percentage of non-organic aquaculture		
	juveniles introduced to the farm shall be: 50 % by 31 December		
	2014 and 0 % by 31 December 2016.		
	4. The collection of wild aquaculture juveniles is specifically		
	restricted to the following cases:		
	(a) natural influx of fish or crustacean larvae and juveniles when		
	filling ponds, containment systems and enclosures;		
	(b) European glass eel, provided that an approved eel		
	management plan is in place for thelocation and artificial		
	reproduction of eel remains unsolved.		
	(c) the collection of wild fry of species other than European eel		
	for on-growing in traditional extensive aquaculture farming		
	inside wetlands, such as brackish water ponds, tidal areas and		
	costal lagoons, closed by levees and banks, provided that:		
	(i) the restocking is in line with management measures		
	approved by the relevant authorities in charge of the		
	management of the fish stocks in question to ensure the		
	sustainable exploitation of the species concerned, and		
	(ii) the fish are fed exclusively with feed naturally available in		
	the environment		
11.12	Aquaculture husbandry rules		
	•		
1	1. The husbandry environment of the aquaculture animals shall be designed in such a way that, in accordance with their species	889-Article 25f	С
	be designed in such a way that, in accordance with their species	<u> </u>

Ref		EU ref	Compliance/
	specific needs, the aquaculture animals shall:		Equivalence
	(a) have sufficient space for their wellbeing;		
	(b) be kept in water of good quality with sufficient oxygen		
	levels;		
	(c) be kept in temperature and light conditions in accordance		
	with the requirements of the species and having regard to the		
	geographic location;		
	(d) in the case of freshwater fish, the bottom type shall be as		
	close as possible to natural conditions; and		
	(e) in the case of carp, the bottom shall be natural earth.		
	2. Stocking density and husbandry practices are set out in Annex		
	X by species or group of species. In considering the effects of		
	stocking density and husbandry practices on the welfare of		
	farmed fish, the condition of the fish (such as fin damage, other		
	injuries, growth rate, behaviour expressed and overall health)		
	and the water quality shall be monitored.		
	3. The design and construction of aquatic containment systems		
	shall provide flow rates and physiochemical parameters that		
	safeguard the animals' health and welfare and provide for their		
	behavioural needs.		
	4. Containment systems shall be designed, located and operated		
	to minimise the risk of escape incidents.		
	5. If fish or crustaceans escape, appropriate action must be taken		
	to reduce the impact on the local ecosystem, including recapture,		
	where appropriate. Documentary evidence shall be maintained.		
11.13	Specific rules for aquatic containment systems		
	1. Closed recirculation aquaculture animal production facilities		
	are prohibited, with the exception of hatcheries and nurseries or	889-Article 25g	
	for the production of species used for organic feed organisms.		С
	2. Rearing units on land shall meet the following conditions:		
	(a) for flow-through systems it must be possible to monitor and		
	control the flow rate and water quality of both in-flowing and		
	out-flowing water;		
	(b) at least 5% of the perimeter ("land-water interface") area		
	shall have natural vegetation.		
	3. Containment systems at sea shall:		
	(a) be located where water flow, depth and water-body		
	exchange rates are adequate to minimise the impact on the		
	seabed and the surrounding water body; and		
	(b) have suitable cage design, construction and maintenance		
	with regard to their exposure to the operating environment.		
	4. Artificial heating or cooling of water shall only be permitted		
	in hatcheries and nurseries. Natural borehole water may be used		
	to heat or cool water at all stages of production.		
11.14	Management of aquaculture animals		
	1. Handling of aquaculture animals shall be minimised,	889-Article 25h	
	undertaken with the greatest care and proper equipment and	009-Article 25h	С
j <sub>i</sub>	1 1 1 1	1

Ref		EU ref	Compliance/
	protocols used to avoid stress and physical damage associated		Equivalence
	with handling procedures. Broodstock shall be handled in a		
	manner to minimise physical damage and stress and under		
	anaesthesia where appropriate. Grading operations shall be kept		
	to a minimum and as required to ensure fish welfare.		
	2. The following restrictions shall apply to the use of artificial		
	light:		
	(a) for prolonging natural day-length it shall not exceed a		
	maximum that respects the ethological needs, geographical		
	conditions and general health of farmed animals, this maximum		
	shall not exceed 16 hours per day, except for reproductive		
	purposes;		
	(b) Abrupt changes in light intensity shall be avoided at the		
	changeover time by the use of dimmable lights or background		
	lighting.		
	3. Aeration is permitted to ensure animal welfare and health,		
	under the condition that mechanical aerators are preferably		
	powered by renewable energy sources. All such use is to be		
	recorded in the aquaculture production record.		
	4. The use of oxygen is only permitted for uses linked to animal		
	health requirements and critical periods of production or		
	transport, in the following cases:		
	(a) exceptional cases of temperature rise or drop in atmospheric		
	pressure or accidental pollution,		
	(b) occasional stock management procedures such as sampling		
	and sorting,		
	(c) in order to assure the survival of the farm stock.		
	Documentary evidence shall be maintained.		
	5. Slaughter techniques shall render fish immediately		
	unconscious and insensible to pain. Differences in harvesting		
	sizes, species, and production sites must be taken into account		
11.15	when considering optimal slaughtering methods.  Breeding – prohibition of hormones		
11.15	The use of hormones and hormone derivatives is prohibited.	889-Article 25i	С
11.16	Feed for fish, crustaceans and echinoderms-general		-
11.10	Feeding regimes shall be designed with the following priorities:		
	1. animal health;	889-Article 25j	С
	2. high product quality, including the nutritional composition		
	which shall ensure high quality of the final edible product;		
	3. low environmental impact;		
11.17	Specific rules on feeds for carnivorous aquaculture animals		
	Feed for carnivorous aquaculture animals shall be sourced	000 4 (1.1.05)	
	with the following priorities:	889-Article 25k	E
	(a) organic feed products of aquaculture origin;		
	(b) fish meal and fish oil from organic aquaculture trimmings;		
	(c) fish meal and fish oil and ingredients of fish origin derived

	in sustainable fisheries;		1
	(d) organic feed materials of plant origin and of animal origin as		
	listed in Annex V and the restriction laid down therein are		
	complied with.		
	(e) feed products derived from whole fish caught in fisheries		
	certified as sustainable or conservational under a national or		
	regional scheme recognised by the respective country.		
	3. The feed ration may comprise a maximum of 60 % organic		
	plant products.		
	4. Astaxanthin derived primarily from organic sources, such as		
	organic crustacean shells may be used in the feed ration for		
	·		
	salmon and trout within the limit of their physiological needs. If		
	organic sources are not available natural sources of astaxanthin		
	(such as Phaffia yeast) may be used.		
	5. Histidine produced through fermentation may be used in the		
	feed ration for salmonid fish when the feed sources listed in		
	paragraph 1 do not provide a sufficient amount of histidine to		
	meet the dietary needs of the fish and prevent the formation of		
	cataracts.		
11.18	Specific rules on feeds for certain aquaculture animals		
	1. In the grow-out stages, aquaculture animals as referred to in	889-Article 25l	С
	Annex X, Section 6, Section 7 and Section 9 shall be fed with feed		
	naturally available in ponds and lakes.		
	2. Where natural feed resources are not available in sufficient		
	quantities as referred to in paragraph 1, organic feed of plant		
	origin, preferably grown on the farm itself or seaweed may be		
	used. Operators shall keep documentary evidence of the need to		
	use additional feed.		
	3. Where natural feed is supplemented according to paragraph		
	2: (a) the feed ration of siamese catfish (Pangasius spp.) as

11 00	<ol> <li>Feed materials of animal and mineral origin may be used in organic aquaculture, only if listed in Annex V.</li> <li>Feed additives, certain products used in animal nutrition and processing aids may be used if listed in Annex VI and the restrictions laid down therein are complied with.</li> </ol>	889-Article 25m	С
11.20	Specific rules for molluscs		
11.20.1	Growing area		
	1. Bivalve mollusc farming may be carried out in the same area of water as organic finfish and seaweed farming in a polyculture system to be documented in the sustainable management plan. Bivalve molluscs may also be grown together with gastropod molluscs, such as periwinkles, in polyculture.  2. Organic bivalve mollusc production shall take place within areas delimited by posts, floats or other clear markers and shall, as appropriate, be restrained by net bags, cages or other man made means.  3. Organic shellfish farms shall minimise risks to species of conservation interest. If predator nets are used their design shall not permit diving birds to be harmed	889-Article 25n	С
	Sourcing of seed		
	1. Provided that there is no significant damage to the environment and if permitted by local legislation, wild seed from outside the boundaries of the production unit can be used in the case of bivalve shellfish provided it comes from:  (a) settlement beds which are unlikely to survive winter weather or are surplus to requirements, or  (b) natural settlement of shellfish seed on collectors.  Records shall be kept of how, where and when wild seed was collected to allow traceability back to the collection area.  However, the maximum percentage of seed from non-organic bivalve shellfish hatcheries may be introduced to the organic production units with the following maximum percentages: 50 % by 31 December 2014 and 0 % by 31 December 2016.  2. For the cupped oyster, Crassostrea gigas, preference shall be given to stock which is selectively bred to reduce spawning in the wild.	889-Article 250	C
11.20.3	Management		
	1. Production shall use a stocking density not in excess of that used for non-organic shellfish in the locality. Sorting, thinning and stocking density adjustments shall be made according to the biomass and to ensure animal welfare and high product quality.  2. Biofouling organisms shall be removed by physical means or by hand and where appropriate returned to the sea away from shellfish farms. Shellfish may be treated once during the production cycle with a lime solution to control competing	889-Article 25p	С

Ref		EU ref	Compliance/ Equivalence
	fouling organisms.		
11.20.4	Cultivation rules		
	<ol> <li>Cultivation on mussel ropes and other methods listed in Annex X, Section 8 may be eligible for organic production.</li> <li>Bottom cultivation of molluscs is only permitted where no significant environmental impact is caused at the collection and</li> </ol>	889-Article 25q	С
11.20.5	growing sites. The evidence of minimal environmental impact shall be supported by a survey and report on the exploited area to be provided by the operator to the control body or control authority. The report shall be added as a separate chapter to the sustainable management plan.  Specific cultivation rules for oysters		
11.20.5	Cultivation in bags on trestles is permitted. These or other structures in which the oysters are contained shall be set out, so as to avoid the formation of a total barrier along the shoreline. Stock shall be positioned carefully on the beds in relation to tidal flow to optimise production. Production shall meet the criteria	889-Article 25r	С
11 01	listed in the Annex X, Section 8.		
11.21	Disease prevention and veterinary treatment		
11.21.1	General rules on disease prevention  1. The animal health management plan in conformity with Article	000 4 1: 1 25	
	9 of Directive 2006/88/EC shall detail biosecurity and disease prevention practices including a written agreement for health counselling, proportionate to the production unit, with qualified aquaculture animal health services who shall visit the farm at a frequency of not less than once per year and not less than once every two years in the case of bivalve shellfish.  2. Holding systems, equipment and utensils shall be properly cleaned and disinfected. Only products listed in Annex VII, Sections 2.1 to 2.2 may be used.  3. With regard to fallowing:  (a) The control body shall determine whether fallowing is necessary and the appropriate duration which shall be applied and documented after each production cycle in open water containment systems at sea. Fallowing is also recommended for other production methods using tanks, fishponds, and cages;  (b) it shall not be mandatory for bivalve mollusc cultivation;  (c) during fallowing the cage or other structure used for aquaculture animal production is emptied, disinfected and left empty before being used again.  4. Where appropriate, uneaten fish-feed, faeces and dead animals shall be removed promptly to avoid any risk of significant environmental damage as regards water status quality, minimise disease risks, and to avoid attracting insects or rodents.  5. Ultraviolet light and ozone may be used only in hatcheries and nurseries.  6. For biological control of ectoparasites, preference shall be given

Ref		EU ref	Compliance/ Equivalence
	to the use of cleaner fish and to the use of freshwater, marine		•
	water and sodium chloride solutions.		
11.21.2	Veterinary treatments		
	1. When despite preventive measures to ensure animal health, a	889-Article 25t	
	health problem arises, veterinary treatments may be used in the	669-Article 25t	С
	following order of preference:		
	(a) substances from plants, animals or minerals in a		
	homoeopathic dilution;		
	(b) plants and their extracts not having anaesthetic effects, and		
	(c) substances such as: trace elements, metals, natural immuno-		
	stimulants or authorised probiotics.		
	2. The use of allopathic treatments is limited to two courses of		
	treatment per year, with the exception of vaccinations and		
	compulsory eradication schemes. However, in the cases of a		
	production cycle of less than a year a limit of one allopathic		
	treatment applies. If the mentioned limits for allopathic		
	treatments are exceeded the concerned aquaculture animals can		
	not be sold as organic products.		
	3. The use of parasite treatments, not including compulsory		
	control schemes operated by respective national or regional		
	authorities shall be limited to twice per year or once per year		
	where the production cycle is less than 18 months.		
	4. The withdrawal period for allopathic veterinary treatments		
	and parasite treatments according to paragraph 3 including		
	treatments under compulsory control and eradication schemes		
	shall be twice the legal withdrawal period as referred to in Article	!	
	11 of Directive 2001/82/EC (this Article defines that "Unless the		
	medicinal product used indicates a withdrawal period for the		
	species concerned, the specified withdrawal period shall not be		
	less than: 7 days for eggs; 7 days for milk; 28 days for meat from		
	poultry and mammals including fat and offal; 500 degree-days		
	for fish meat") or in a case in which this period in not specified 48		
	hours.		
	5. Whenever veterinary medicinal products are used, such use is		
	to be declared to the control body or the control authority before		
	the animals are marketed as organic. Treated stock shall be		
	clearly identifiable.		
11.22	Transport of live fish		
	1. Live fish shall be transported in suitable tanks with clean water	000 4 :: 1 22	
	which meets their physiological needs in terms of temperature	889-Article 32a.	С
	and dissolved oxygen.		
	2. Before transport of organic fish and fish products, tanks shall		
	be thoroughly cleaned, disinfected and rinsed.		
	3. Precautions shall be taken to reduce stress. During transport,		
	the density shall not reach a level which is detrimental to the		
	species.

#### Annex I

### Fertilisers, soil conditioners and nutrients referred to in 6.4.4

Note

A: authorised under Regulation (EEC) No 2092/91 and carried over by Article 16(3)(c) of Regulation (EC) No 834/2007 B: authorised under Regulation (EC) No 834/2007

Authorisation	Name Compound products or products containing only materials listed hereunder:	Description, compositional requirements, conditions for use
A	Farmyard manure	Product comprising a mixture of animal excrements and vegetable matter (animal bedding).  Factory farming origin forbidden
A	Dried farmyard manure and dehydrated poultry manure	Factory farming origin forbidden
A	Composted animal excrements, including poultry manure and composted farmyard manure included	Factory farming origin forbidden
A	Liquid animal excrements	Use after controlled fermentation and/or appropriate dilution Factory farming origin forbidden
В	Composted or fermented mixture of household waste	Product obtained from source separated household waste, which has been submitted to composting or to anaerobic fermentation for biogas production Only vegetable and animal household waste Only when produced in a closed and monitored collection system, Maximum concentrations in mg/kg of dry matter: cadmium: 0,7; copper: 70; nickel: 25; lead: 45; zinc: 200; mercury: 0,4; chromium (total): 70; chromium (VI): not detectable
A	Peat	Use limited to horticulture (market gardening, floriculture, arboriculture, nursery)
A	Mushroom culture wastes	The initial composition of the substrate shall be limited to products of this Annex
A	Dejecta of worms (vermicompost) and insects	
A	Guano	
A	Composted or fermented mixture of vegetable matter	Product obtained from mixtures of vegetable matter, which have been submitted to composting or to anaerobic fermentation for biogas production
В	Biogas digestate containing animal by-products co-digested with material of plant or animal origin as listed in this Annex	Animal by-products (including by-products of wild animals) of category 3 and digestive tract content of category 2 (defined in Art.7 of this Regulation) (*) must not be from factory farming origin.

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Authorisation	Name Compound products or products containing only materials listed hereunder:	Description, compositional requirements, conditions for use
		The Processes have to be in accordance with Commission Regulation (EU) No 142/2011 (**)  Not to be applied to edible parts of the crop

<sup>(\*)</sup> as defined in Article 7 of Regulation (EC) No 1069/2009 of the European Parliament and of the Council of 21 October 2009 laying down health

rules as regards animal by-products and derived products not intended for human consumption and repealing Regulation (EC) No 1774/2002 (Animal by-products Regulation) (OJ L 300, 14.11.2009, p. 1).

(\*\*) Commission Regulation (EU) No 142/2011 of 25 February 2011 implementing Regulation (EC) No 1069/2009 of the European Parliament and of the Council laying down health rules as regards animal by-products and derived products not intended for human consumption and implementing Council Directive 97/78/EC as regards certain samples and items

	veterinary checks at the border under that Directive (OJ L 5	o i
В	Products or by-products of animal origin as below: blood meal hoof meal horn meal bone meal or degelatinised bone meal fish meal meat meal feather, hair and 'chiquette' meal wool fur (1) Hair dairy products hydrolised proteins (2)	(1) Maximum concentration in mg/kg of dry matter of chromium (VI): not detectable (2) Not to be applied to edible parts of the crop'
A	Products and by-products of plant origin for fertilisers	Examples: oilseed cake meal, cocoahusks, malt culms
A	Seaweeds and seaweed products	As far as directly obtained by: (i) physical processes including dehydration, freezing and grinding (ii) extraction with water or aqueous acid and/or alkaline solution (iii) fermentation
A	Sawdust and wood chips	Wood not chemically treated after felling
A	Composted bark	Wood not chemically treated after felling
A	Wood ash	From wood not chemically treated after felling
A	Soft ground rock phosphate	Product as specified in point 7 of Annex IA.2. to Regulation (EC) No 2003/2003 of the European Parliament and of the Council (1) relating to fertilisers 7 Cadmium content less than or equal to 90 mg/kg of P205
A	Aluminium-calcium phosphate	Product as specified in point 6 of Annex IA.2. of Regulation 2003/2003, Cadmium content less than or equal to 90

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Authorisation	Name	Description, compositional requirements,	
	Compound products or products	conditions for use	
	containing only materials listed hereunder:		
		mg/kg of P <sub>2</sub> 0 <sub>5</sub>	
		Use limited to basic soils (pH > 7,5)	
A	Basic slag	Products as specified in point 1 of Annex IA.2. of Regulation 2003/2003	
A	Crude potassium salt or kainit	Products as specified in point 1 of Annex IA.3. of Regulation 2003/2003	
A	Potassium sulphate, possibly containing magnesium salt	Product obtained from crude potassium salt by a physical extraction process, containing possibly also magnesium salts	
A	Stillage and stillage extract	Ammonium stillage excluded	
A	Calcium carbonate (chalk, marl, ground limestone, Breton ameliorant, (maerl), phosphate chalk)	Only of natural origin	
В	Mollusc waste	Only from sustainable fisheries, in which the exploitation of stock is done in such way, so that it does not have a negative impact on the marine ecosystems and does not prejudice the future exploitation of the stock (*) or organic aquaculture	
В	Egg shells	Factory farming origin forbidden	
A	Magnesium and calcium carbonate	Only of natural origin e.g. magnesian chalk, ground magnesium, limestone	
A	Magnesium sulphate (kieserite)	Only of natural origin	
A	Calcium chloride solution	Foliar treatment of apple trees, after identification of deficit of calcium	
A	Calcium sulphate (gypsum)	Products as specified in point 1 of Annex ID. of Regulation 2003/2003 Only of natural origin	
A,B	Industrial lime from sugar production	By-product of sugar production from sugar beet	
A	Industrial lime from vacuum salt production	By-product of the vacuum salt production from brine found in mountains	
A	Elemental sulphur	Products as specified in Annex ID.3 of Regulation 2003/2003	
A	Trace elements	Inorganic micronutrients listed in part E of Annex I to Regulation 2003/2003	
A	Sodium chloride	Only mined salt	
A	Stone meal and clays		
В	Leonardite (Raw organic sediment rich in humic acids)	Only if obtained as a by-product of mining activities	
В	Humic and fulvic acids	Only if obtained by inorganic salts/solutions excluding ammonium salts; or obtained from drinking water purification	
В	Xylite	Only if obtained as by-product of mining activities (e.g. by-product of brown coal mining)	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Authorisation	Name Compound products or products containing only materials listed hereunder:	Description, compositional requirements, conditions for use
В	Chitin (Polysaccharide obtained from the shell of crustaceans)	Only if obtained from sustainable fisheries in which the exploitation of stock is done in such way, so that it does not have a negative impact on the marine ecosystems and does not prejudice the future exploitation of the stock (*) or organic aquaculture
В	Organic rich sediment from fresh water bodies formed under exclusion of oxygen (e.g. sapropel)	Only organic sediments that are byproducts of fresh water body management or extracted from former freshwater Areas. When applicable, extraction should be done in a way to cause minimal impact on the aquatic system.  Only sediments derived from sources free from contaminations of pesticides, persistent organic pollutants and petrol like substances.  Maximum concentrations in mg/kg of dry matter: cadmium: 0,7; copper: 70; nickel: 25; lead: 45; zinc: 200; mercury: 0,4; chromium (total): 70; chromium (VI): not Detectable.
В	Biochar – pyrolysis product made from a wide variety of organic materials of plant origin and applied as a soil conditioner	Only from plant materials, untreated or treated with products included in Annex II.  Maximum value of 4 mg polycyclic aromatic hyro-carbons (PAHs) per kg dry matter (DM). This value shall be reviewed every second year, taking into account the risk of accumulation due to multiple applications.

(\*) as defined in Article 4(1) (7) of Regulation (EU) No 1380/2013: "maximum sustainable yield' means the highest theoretical equilibrium yield that can be continuously taken on average from a stock under existing average environmental conditions without significantly affecting the reproduction process"

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

## Annex II Plant protection products referred to in 6.5.1

All the substances listed in this Annex have to comply at least with the conditions for use as specified in the Annex to Commission Implementing Regulation (EU) No 540/2011 (¹). More restrictive conditions for use for organic production are specified in the second column of each table.

1. Substances of crop or animal origin

Name	Description, compositional requirement, conditions for use
Allium sativum (Garlic extract)	
Azadirachtin extracted from Azadirachta indica (Neem tree)	Insecticide
Basic substances	Only those basic substances within the meaning of Article 23(1) of Regulation (EC) No 1107/2009 of the European Parliament and of the Council (1) that are covered by the definition of "foodstuff" in Article 2 of Regulation (EC) No 178/2002 of the European Parliament and of the Council (2) and have plant or animal origin. Substances not to be used as herbicides, but only for the control of pests and diseases
Beeswax	Pruning agent/wound protectant
COS-OGA	
Hydrolysed proteins excluding gelatine	
Laminarin	Kelp shall be either grown organically in accordance with 11.3 and 11.4
Maltodextrin	
Pheromones	Only in traps and dispensers
Plant oils	All uses authorized, except herbicide
Pyrethrins	Only from plant origin
Pyrethroids (only deltamethrin or lambdacyhalothrin)	Only in traps with specific attractants; only against Bactrocera oleae and Ceratitis capitata Wied.
Quassia extracted from Quassia amara	Insecticide, repellent
Repellents by smell of animal or plant origin/ sheep fat Salix spp. Cortex (aka willow bark extract)	Only on non-edible parts of the crop and where crop material is not ingested by sheep or goats.
Terpenes (eugenol, geraniol, thymol)	

2. Micro-organisms or substances produced by micro-organisms

Name	Description, compositional requirement, conditions for use	
Micro-organisms	Not from GMO origin	
Spinosad		
Cerevisane		

#### 3. Substances other than those mentioned in Sections 1 and 2

© International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Name	Description, compositional requirement, conditions for use
Aluminium silicate (Kaolin)	
Calcium hydroxide	When used as fungicide, only in fruit trees, including nurseries, to control <i>Nectria galligena</i> .
Carbon dioxide	
Copper compounds in the form of copper hydroxide, copper oxychloride, copper oxide, Bordeaux mixture, and tribasic copper sulphate	Only uses resulting in a total application of maximum 28kg of copper per hectar over a period of 7 years shall be authorized. The amount of authorized active substance applied in terms of rates and number of applications does not exceed the minimum necessary to achieve the desired effects and does not cause any unacceptable effect on the environment taking into account background levels of copper at the application site, and, where the information is available, copper input from other sources. The certification body may decide to set a maximum annual application rate not exceeding 4kg/ha of copper.
Diammonium Phosphate	Only as attractant in traps
Ethylene	
Fatty acids	All uses authorised, except herbicide
Ferric phosphate (iron (III) orthophosphate)	Preparations to be surface- spread between cultivated plants
Hydrogen peroxide	
Kieselgur (diatomaceous earth)	
Lime sulphur (calcium polysulphide)	
Paraffin oil	
Potassium and sodium hydrogen carbonate (aka potassium bicarbonate)	
Quartz sand	
Sodium chloride	All uses authorized, except herbicide
Sulphur	

Article 23 Approval criteria for basic substances of EC 1107/2009, "(1) Basic substances shall be approved in accordance with paragraphs 2 to 6. By way of derogation from Article 5 (defining that approval of the substance is for 10 years), the approval shall be for an unlimited period. For the purpose of paragraphs 2 to 6, basic substance is an active substance which: a) is not a substance of concern; b) does not have an inherent capacity to cause endocrine disrupting, neurotoxic or immunotoxic effects; and c) is not predominantly used for plant protection purposes but nevertheless is useful in plant protection either directly or in a product consisting of the substance and a simple dilutent; d) is not placed on the market as a plant protection product.

For the purpose of this Regulation an active substance which fulfils the criteria of a foodstuff as defined in Article 2 of Regulation EC 178/2002 shall be considered as a basic substance."

#### Regulation EC 178/2002, Article 2 Definition of food:

For the purposes of this Regulation, 'food' (or 'foodstuff') means any substance or product, whether processed, partially processed or unprocessed, intended to be, or reasonably expected to be ingested by humans.

'Food' includes drink, chewing gum and any substance, including water, intentionally incorporated into the food during its manufacture, preparation or treatment. It includes water after the point of compliance

© International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

as defined in Article 6 of Directive 98/83/EC and without prejudice to the requirements of Directives 80/778/EEC and 98/83/EC. 'Food' shall not include: (a) feed; (b) live animals unless they are prepared for placing on the market for human consumption; (c) plants prior to harvesting; (d) medicinal products within the meaning of Council Directives 65/65/EEC (1) and 92/73/EEC (2); (e) cosmetics within the meaning of Council Directive 76/768/EEC (3); (f) tobacco and tobacco products within the meaning of Council Directive 89/622/EEC (4); (g) narcotic or psychotropic substances within the meaning of the United Nations Single Convention on Narcotic Drugs, 1961, and the United Nations Convention on Psychotropic Substances, 1971; (h) residues and contaminants.

#### **Annex III**

# Minimum surface areas indoors and outdoors and other characteristics of housing in the different species and types of production referred to in 6.7.12

1. Bovines, equidae, ovine, caprine and porcine

bovines, equidae, ovine, cap	Indoors area (net area available to animals)		Outdoors area (exercise area, excluding pasturage)
Breeding and fattening bovine	Live weight minimum (kg)	M2/head	M2/head
and equidae	up to 100	1.5	1.1
	up to 200	2.5	1.9
	up to 350	4	3
	over 350	5 with a minimum of 1 m2/100 kg	3,7 with a minimum of 0,75 m2/100 kg
Dairy cows		6	4.5
Bulls for breeding		10	30
Sheep and goats		1.5 sheep/goat	2.5
		0.35 lamb/kid	0.5
Farrowing sows with piglets up to 40 days		7.5 sow	2.5
Fattening pigs	up to 50	0.8	0.6
	up to 85	1.1	0.8
	up to 110	1.3	1
	over 110	1.5	1.2
Piglets	over 40 days and up to 30 kg	0.6	0.4
Brood pigs		2,5 female	1.9
		6 male If pens are used for natural service: 10 m2/boar	8.0

2. Poultry

,	Indoors area (	net area availabl	Outdoors area	
	No animals/m2	cm perch/animal	nest	(m2 of area available in rotation/head)
Laying hens	6	18	7 laying hens per nest or in case of common nest 120 cm2/bird	4, provided that the limit of 170 kg of N/ha/year is not exceeded
Fattening poultry (in fixed housing)	10 with a maximum of 21 kg liveweight/m2	20 (for guinea fowl only)		4 broilers and guinea fowl 4,5 ducks 10 turkey 15 geese In all the species

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

			mentioned above the limit of 170 kg of N/ha/year is not exceeded
Fattening poultry in mobile housing	16 (1) in mobile poultry houses with a maximum of 30 kg liveweight/ m2		2.5, provided that the limit of 170 kg of N/ha/year is not exceeded
(1) Only in the case of mobile houses not exceeding 150 m2 floor space.			

Annex IV

Maximum number of animals per hectare referred to in 6.7.6

Class or species	Maximum number of animals per ha equivalent to 170 kg N/ha/year
Equines over six months old	2
Calves for fattening	5
Other bovine animals less than one year old	5
Male bovine animals from one to less than two years old	3.3
Female bovine animals from one to less than two years old	3.3
Male bovine animals two years old or over	2
Breeding heifers	2.5
Heifers for fattening	2.5
Dairy cows	2
Cull dairy cows	2
Other cows	2.5
Female breeding rabbits	100
Ewes	13.3
Goats	13.3
Piglets	74
Breeding sows	6.5
Pigs for fattening	14
Other pigs	14
Table chickens	580
Laying hens	230

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### Annex V

# Feed materials referred to in 6.7.20

### 1. FEED MATERIALS OF MINERAL ORIGIN

### 3.1. **Sodium:**

- sodium sulphate
  - sodium carbonate
- sodium bicarbonate
- sodium chloride

### 3.2. Potassium:

potassium chloride

### 3.3. Calcium:

- lithotamn and maerl
  - Calcareous marine shells
- calcium carbonate
- calcium gluconate

### 3.4. Phosphorus:

- defluorinated dicalcium phosphate
- defluorinated monocalcium phosphate
- monosodium phosphate
  - calcium magnesium phosphate
  - calcium-sodium phosphate
    - Monoammonium phosphate (ammonium dihydrogen orthophosphate): only for acquaculture

# 3.5. Magnesium:

- magnesium oxide (anhydrous magnesia)
- magnesium sulphate
- magnesium chloride
- magnesium carbonate
- magnesium phosphate

# 2 OTHER FEED MATERIALS

Saccharomyces cerevisiae

Saccharomyces carlsbergiensis

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### Annex VI

# Feed additives and certain substances used in animal nutrition referred to in 6.7.20

### 1. FEED ADDITIVES

Additives listed must have been authorised under Regulation (EC) No 1831/2003 of the European Parliament and of the Council (1) on additives for use in animal nutrition.

### 1.1. Nutritional additives

3a Vitamins and pro vitamins

- Vitamins derived from agricultural products
- Synthetic vitamins identical to vitamins derived from agricultural products may be used for monogastric and aquaculture animals;
- Synthetic vitamins A, D, and E identical to vitamins derived from agricultural products may be used for ruminants with prior authorization by the control body based on the assessment of the possibility for organic ruminants to obtain the necessary quantities of the said vitamins through their feed rations.

# 3a920 Betaine anhydrous

- Only for monogastric animals
- Only from natural origin and when available from organic origin

### (b) Trace elements

E1 Iron:	
3b101	Iron(II) carbonate (siderite)
3b103	Iron(II) sulphate monohydrate
3b104	Iron(II) sulphate heptahydrate
3b201	Potassium iodide
3b202	Calcium iodate, anhydrous
3b203	Coated granulated calcium iodate anhydrous
3b301	Cobalt (II) acetate tetrahydrate
3b302	Cobalt (II) carbonate
3b303	Cobalt (II) carbonate hydroxide (2:3)monohydrate
3b304	Coated granulated cobalt (II) carbonate
3b305	Cobalt (II) sulphate heptahydrate
3b402	Copper(II) carbonate dihydroxy monohydrate
3b404	Copper (II) oxide
3b405	Copper (II) sulphate pentahydrate
3b409	Dicopper chloride trihydroxide (TBCC)
3b502	Manganese (II) oxide
3b503	Manganous sulfate, monohydrate
3b603	Zinc oxide
3b604	Zinc sulphate heptahydrate
3b605	Zinc sulphate monohydrate
3b609	Zinc chloride hydroxide monohydrate (TBZC)
3b701	sodium molybdate dihydrate
3b801	sodium selenite
3b8.10, 3	b8.11, 3b8.12, 3b813 and 3b817
-	Selenised yeast inactivated

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

#### 1.2. Zoo-technical additives

4a, 4b, 4c and 4d

Enzymes and micro-organisms in the category of "Zootechnical additives"

### 1.3. Technological additives

(a) Preservatives

E 200 Sorbic acid

E 236 Formic acid

E 237 Sodium formate

E 260 Acetic acid

E 270 Lactic acid

E 280 Propionic acid

E 330 Citric acid.

#### (b) Antioxidant substances

1b 306 (i) — Tocopherol extracts from vegetable oils

1b 306(ii) – Tocopherol-rich extracts from vegetable oils (delta rich)

### c) Emulsifying and stabilising agents, thickeners and gelling agents

1c322 – Lecithin Only when derived from organic raw material. Use restricted to aquaculture animal feed.

### (d) Binders and anti-caking agents

E 412 Guar gum

E 535 Sodium ferrocyanide, maximum dose rate of 20mg/kg NaCl calculated as ferrocynide anion

E 551b Colloidal silica

E 551c Kieselgur (diatomaceous earth, purified)

1m 558i Bentonite(montmorillonite)

E 559 Kaolinitic clays, free of asbestos

E 560 Natural mixtures of stearites and chlorite

E 561 Vermiculite

E 562 Sepiolite

E566 Natrolite-phonolite

1g568 Clinoptilolite of sedimentary origin

E 599 Perlite

#### (e) Silage additives

1k Enzyme and micro-organisms

1k236 Formic acid

1k 237 Sodium formate

1k 280 Propionic acid

1k 281 Sodium propionate

: Use restricted to production of silage when weather conditions do not allow for adequate fermentation. The use of formic propionic acid and their sodium salts in the production of silage shall on ly be permitted when weather conditions do not allow for adequate fermentation.

### 1.4 Sensory Additives

 $2b\ Flavouring\ compounds$  - Only when extracted from agricultural products.

Castanea Sativa Mill: Chestnut extract

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### Annex VII

# Products for cleaning and disinfection

# 1. PRODUCTS FOR CLEANING AND DISINFECTION OF BUILDINGS AND INSTALLATIONS FOR ANIMAL PRODUCTION REFERRED TO IN 6.7.4

Potassium and sodium soap

Water and steam

Milk of lime

Lime

Ouicklime

Sodium hypochlorite (e.g. as liquid bleach)

Caustic soda

Caustic potash

Hydrogen peroxide

Natural essences of plants

Citric, peracetic acid, formic, lactic, oxalic and acetic acid

Alcohol

Nitric acid (dairy equipment)

Phosporic acid (dairy equipment)

Formaldehyde

Cleaning and disinfection products for teats and milking facilities

Sodium carbonate

# 2. PRODUCTS FOR CLEANING AND DISINFECTION FOR AQUACULTURE ANIMALS AND SEAWEED PRODUCTION REFERRED TO IN 7.4.3; 11.5; 11.6; 11.7; 11.21.1

# 2.1 Substances for cleaning and disinfection of equipment and facilities in the absence of aquaculture animals may contain the following active substances:

Ozone

sodium chloride

sodium hypochlorite

calcium hypochlorite

calcium hydroxide

calcium oxide

caustic soda

alcohol

hydrogen peroxide

organic acids (acetic acid, lactic acid, citric acid)

humic acid

peroxyacetic acids

peracetic and peroctanoic acids

iodophores (only in the presence of eggs)

potassium permanganate

tea seed cake made of natural camellia seed (use restricted to shrimp production)

mixtures of potassium peroxomonosulphate and sodium chloride producing hypochlorous acid

# 2.2 Limited list of substances for use in the presence aquaculture animals may contain the following active substances:

limestone (calcium carbonate) for pH control  $\,$ 

dolomite for pH correction (use restricted to shrimp production)

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

# **Annex VIII**

# Certain products and substances for use in production of processed organic food, yeast and yeast products referred to in 7.4.1

# SECTION A — FOOD ADDITIVES, INCLUDING CARRIERS

For the purpose of the calculation referred to in 7.4.1 food additives marked with an asterisk in the column of the code number, shall be calculated as ingredients of agricultural origin.

Code	Name	Preparation of foodstuffs of		Specific conditions
		plant origin	animal origin	
E153	vegetable carbon		х	Ashy goat cheese
				Morbier chees
E160b*	annatto, bixin,		x	Red Leicester cheese
	norbixin			Double Gloucester cheese
				Cheddar
7.70				Mimolette cheese
E170	calcium carbonate	X	Х	Shall not be used for colouring or
F220	1 1 1 1 1		N / 1 6	calcium enrichment of products
E220 or	sulphur dioxide	X	X (only for	In fruit wines (*) and mead with
			mead)	and without added sugar: 100
	Potassium		X (only for	mg(**) * in this context "fruit wine" is
E224	metabisulphite	x	mead)	defined as wine made from fruits
	metabisarpine		incut)	other than grapes
				** maximum levels available from
				all sources, expressed as SO <sup>2</sup> in
				mg/l.
E223	Sodium		x	crustaceans
	metabisulphite			
E250	sodium nitrite		x	For meat products. May only be
				used, if it has been demonstrated to
				the satisfaction of the certification body that no technological
				alternative, giving the same
				guarantees and/or allowing to
				maintain the specific features of the
				product, is available. Not in
				combination with E252. Indicative ingoing amount expressed as
				NaNO <sub>2</sub> : 80 mg/kg, maximum
				residual amount expressed as
				NaNO <sub>2</sub> : 50 mg/kg
or				For meat products. May only be
Hara	potassium nitrate			used, if it has been demonstrated to the satisfaction of the certification
E252			X	body that no technological
				alternative, giving the same
				guarantees and/or allowing to
				maintain the specific features of the
				product, is available. Not in combination with E250. Indicative
				ingoing amount expressed as

E948	oxygen	х	х	
E968	Erythritol	х	х	Only when derived from organic production without using ion exchange technology

<sup>&</sup>lt;sup>1</sup> This additive can only be used if it has been demonstrated to the satisfaction of the CB that no technological alternative, giving eh same guarantees and/or allowing to maintain the specific features of the product is available.

<sup>&</sup>lt;sup>2</sup> The restriction concerns only animal products

<sup>&</sup>lt;sup>3</sup> "Dulce de leche" or "confiture de lait" refers to a soft luscious brown cream made of sweetened thickened milk.

# SECTION B — PROCESSING AIDS AND OTHER PRODUCTS, WHICH MAY BE USED FOR PROCESSING OF INGREDIENTS OF AGRICULTURAL ORIGIN FROM ORGANIC PRODUCTION

Name	Preparation of foodstuffs of		Specific conditions
	plant origin	animal origin	
water	х	Х	drinking water within the meaning of Council Directive 98/83/EC
calcium chloride	x	x	coagulation agent with regard to foodstuffs of animal origin: sausages based on meat
calcium carbonate	x		
calcium hydroxide	x		
calcium sulphate	x		coagulation agent
magnesium chloride (nigari)	х		coagulation agent
potassium carbonate	x		drying of grapes
sodium carbonate	x	x	
lactic acid		х	for the regulation of the pH of the brine bath in cheese production <sup>1</sup>
L(+)lactic acid from fermentation	х		For the preparation of plant protein extracts <sup>1</sup>
citric acid	x	x	
sodium hydroxide	x		For sugar(s) production. 2 For oil production excluding olive oil production; for the preparation of plant protein extracts
sulphuric acid	x	x	Gelatin production1; sugar(s)production2
Hop extract	х		Only for antimicrobial purposes in production of sugar. When available from organic production. 2
Pine rosin extract	x		Only for antimicrobial purposes in production of sugar. When available from organic production
hydrochloric acid		х	gelatine production <sup>1</sup> ; for the regulation of the pH of the brine bath in processing of Gouda, Edam and Maasdammer cheeses; Boerenkaas, Friese and Leidse Nagelkaas
ammonium hydroxide		х	gelatine production2
hydrogen peroxide		х	gelatine production2
carbon dioxide	х	х	
nitrogen	х	х	
ethanol	х	х	solvent
tannic acid	х		filtration aid
egg white albumen	х		
casein	х		
gelatin	x		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Name	Preparation of foodstuffs of		Specific conditions
	plant origin	animal origin	
isinglass	х		
vegetable oils	х	х	greasing, releasing or anti-foaming agent. Only when derived from organic production
silicon dioxide gel or colloidal solution	х		
activated carbon	x	X	
talc	х		in compliance with the specific purity criteria for food additive E553b
bentonite	х	х	sticking agent for mead <sup>1</sup>
cellulose	х	x	gelatine production <sup>1</sup>
diatomaceous earth	х	х	gelatine production <sup>1</sup>
perlite	х	х	gelatine production <sup>1</sup>
hazelnut shells	х		
rice meal	х		
beeswax	х		releasing agent Beeswax from organic beekeeping
carnauba wax	х		releasing agent Only when derived from organic production. Applicable as of 1 January 2022. Until that date, only when derived from organic raw material
Acetic acid/vinegar		х	Only when derived from organic production. For fish processing only. From natural fermentation.Not to be produced by or from GMO
Thiamin	x	x	Only for use in processing of fruit wines,
hydrochloride			including cider and perry and mead
Diammonium phosphate	x	x	Only for use in processing of fruit wines, including cider and perry and mead
Wood fibre	X	x	The source of timber should be restricted to
			certified, sustainably harvested wood.
			Wood used must not contain toxic
			components (post-harvest treatment,
			naturally occurring toxins or toxins from
			microorganisms)

<sup>&</sup>lt;sup>1</sup> The restriction concerns only animal products <sup>2</sup> The restriction concerns only plant products

# SECTION C — PROCESSING AIDS FOR THE PRODUCTION OF YEAST AND YEAST PRODUCTS

Note: Section C authorised under Regulation (EC) No 1254/2008

Name	Primary Yeast	Yeast confections/ formulations	Specific conditions
Calcium chloride	Х		
Carbon dioxide	Х	X	
Citric acid	Х		For the regulation of the pH in yeast production
Lactic acid	X		For the regulation of the pH in yeast production
Nitrogen	X	X	
Oxygen	Х	X	
Potato starch	Х	Х	For filtering Only when derived from organic production
Sodium carbonate	Х	X	For the regulation of the pH
Vegetable oils	Х	Х	Greasing, releasing or anti-foaming agent Only when derived from organic production

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

# **Annex VIIIa**

# Products and substances permitted for use or addition in organic products of the wine sector referred to in 7.4.4

Note: Type of treatment in accordance with Annex III, point A(2)(b) to Regulation (EC) No 606/2009

Type of treatment	Name of products or substances	Specific conditions or restrictions
Use for aeration or oxygenation	Air Gaseous oxygen	
Centrifuging and filtration	Perlite Cellulose Diatomaceous earth	Use only as an inert filtering agent
Use in order to create an inert atmosphere and to handle the product shielded from the air	Nitrogen Carbon dioxide Argon	
Use	Yeasts <sup>20</sup> ,yeast cell walls	
Use	Di-ammonium phosphate Thiamine hydrochloride Yeast autolysates	
Use	Sulphur dioxide Potassium bisulphite or potassium metabisulphite	(a) The maximum sulphur dioxide content shall not exceed 100 milligrams per litre for red wines and with a residual sugar level lower than 2 grams per litre; (b) The maximum sulphur dioxide content shall not exceed 150 milligrams per litre for white and rose' wines and with a residual sugar level lower than 2 grams per litre; (c) For all other wines, the maximum sulphur dioxide content applied in accordance with Annex I B to Regulation (EC) No 606/2009 shall be reduced by 30 milligrams per litre.
Use	Charcoal for oenological use	
Clarification	Edible gelatine <sup>21</sup> Plant proteins from wheat or peas <sub>21</sub> Isinglass <sup>21</sup> Egg white albumin <sup>21</sup> Tannins <sup>21</sup> Potato protein <sup>21</sup>	

 $<sup>^{20}\,</sup>$  For the individual yeast strains: if available, derived from organic raw material.

 $<sup>^{\</sup>rm 21}\,$  Derived from organic raw material if available.

Type of treatment	Name of products or substances	Specific conditions or restrictions
	Yeast protein extracts <sup>21</sup>	
	Casein Chitosan derived from <i>Aspergillus</i>	
	niger Potassium caseinate	
	Silicon dioxide Bentonite	
Use for acidification purposes	Pectolytic enzymes  Lactic acid	
Use for deacidification purposes	L(+)Tartaric acid L(+)Tartaric acid Calcium carbonate Neutral potassium tartrate Potassium bicarbonate	
Addition	Aleppo pine resin	
Use	Lactic bacteria	
Addition	L-Ascorbic acid	
Use for bubbling	Nitrogen	
Addition	Carbon dioxide	
Addition for wine stabilization purposes	Citric acid	
Addition	Tannins <sup>21</sup>	
Addition	Meta-tartaric acid	
Use	Acacia gum <sup>21</sup> (= gum arabic)	
Use	Potassium bitartrate	
Use	Cupric citrate	
Use	Yeast mannoproteins	
Use	Oak chips	
Use	Potassium alginate	
Use	Chitosan derived from Aspergillus niger	
Use	Inactivated yeast	
Type of treatment	Calcium sulphate	Only for "vino generoso" or "vino generoso de licor"

### Annex IX

# For the purpose of this standard, the following definitions shall apply

- 1. 'organic production' means the use of the production method compliant with the rules established in this Regulation, at all stages of production, preparation and distribution;
- 2. 'stages of production, preparation and distribution' means any stage from and including the primary production of an organic product up to and including its storage, processing, transport, sale or supply to the final consumer, and where relevant labelling, advertising, import, export and subcontracting activities;
- 3. 'organic' means coming from or related to organic production;
- (4) 'operator' means the natural or legal persons responsible for ensuring that the requirements of this Regulation are met within the organic business under their control;
- (5) 'plant production' means production of agricultural crop products including harvesting of wild plant products for commercial purposes;
- (6) 'production unit" means all assets to be used for a production sector such as production premises, land parcels, pasturages, open air areas, livestock buildings, fish ponds, containment systems for seaweed or aquaculture animals, shore or seabed concessions, the premises for the storage of crops, crop products, seaweed products, animal products, raw materials and any other input relevant for this specific production sector;
- (7) the definition of 'aquaculture' is that given in Council Regulation (EC) No 1198/2006 of 27 July 2006 on the European Fisheries Fund<sup>22</sup>;
- (8) 'conversion' means the transition from non-organic to organic farming within a given period of time, during which the provisions concerning the organic production have been applied;
- (9) 'preparation' means the operations of preserving and/or processing of organic products, including slaughter and cutting for livestock products, and also packaging, labelling and/or alterations made to the labelling concerning the organic production method;
- (10) 'closed recirculation aquaculture facility' means a facility where aquaculture takes place within an enclosed environment on land or on a vessel involving the recirculation of water, and depending on permanent external energy input to stabilise the environment for the aquaculture animals;
- (11) 'energy from renewable sources' means renewable non-fossil energy sources: wind, solar, geothermal, wave, tidal, hydropower, landfill gas, sewage treatment plant gas and biogases;
- (12) 'hatchery' means a place of breeding, hatching and rearing through the early life stages of aquaculture animals, finfish and shellfish in particular;

<sup>22</sup> OJ L 223, 15.8.2006, p. 1.

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (13) 'nursery' means a place where an intermediate farming system, between the hatchery and grow-out stages is applied. The nursery stage is completed within the first third of the production cycle with the exception of species undergoing a smoltification process;
- (14) 'pollution' in the framework of aquaculture and seaweed production means the direct or indirect introduction into the aquatic environment of substances or energy as defined in Directive 2008/56/EC of the European Parliament and of the Council<sup>23</sup> and in Directive 2000/60/EC of the European Parliament and of the Council<sup>24</sup>, in the waters where they respectively apply;
- (15) "polyculture" in the framework of aquaculture and seaweed production, means the rearing of two or more species usually from different trophic levels in the same culture unit;
- (16) "production cycle" in the framework of aquaculture and seaweed production, means the lifespan of an aquaculture animal or seaweed from the earliest life stage to harvesting;
- (17) "locally grown species" in the framework of aquaculture and seaweed production, means those which are neither alien nor locally absent species under Council Regulation (EC) No 708/2007<sup>25</sup>. Those species listed in Annex IV of Regulation (EC) No 708/2007 may be considered as locally grown species.
- (18) "stocking density" in the framework of aquaculture, means the live weight of animals per cubic metre of water at any time during the grow-out phase and in the case of flatfish and shrimp the weight per square metre of surface.
- (19) the definitions of 'food', 'feed' and 'placing on the market' are those given in Regulation (EC) No 178/2002 of the European Parliament and of the Council of 28 January 2002 laying down the general principles and requirements of food law, establishing the European Food Safety Authority and laying down procedures in matters of food safety<sup>26</sup>;
- (20) 'labelling' means any terms, words, particulars, trade marks, brand name, pictorial matter or symbol relating to and placed on any packaging, document, notice, label, board, ring or collar accompanying or referring to a product;
- (21) the definition of 'pre-packaged foodstuff' is that given in Article 13.(b) of Directive 2000/13/EC of the European Parliament and of the Council of 20 March 2000 on the approximation of the laws of the Member States relating to the labelling, presentation and advertising of foodstuffs<sup>27</sup>;
- (22) 'advertising' means any representation to the public, by any means other than a label, that is intended or is likely to influence and shape attitude, beliefs and behaviours in order to promote directly or indirectly the sale of organic products;

<sup>&</sup>lt;sup>23</sup> OJ L 164, 25.6.2008, p. 19.

<sup>&</sup>lt;sup>24</sup> OJ L 327, 22.12.2000, p. 1.

<sup>&</sup>lt;sup>25</sup> OJ L 168, 28.6.2007, p. 1.

 $<sup>^{26}\,</sup>$  OJ L 31, 1.2.2002, p. 1. Regulation as last amended by Commission Regulation (EC) No 575/2006 (OJ L 100, 8.4.2006, p. 3).

OJ L 109, 6.5.2000, p. 29. Directive as last amended by Commission Directive 2006/142/EC (OJ L 368, 23.12.2006, p. 110).

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (23) 'competent authority' means the central authority competent for the organisation of official controls in the field of organic production in accordance with the provisions set out under this Regulation, or any other authority on which that competence has been conferred to; it shall also include, where appropriate, the corresponding authority of a third country;
- (24) 'control authority' means a public administrative organisation to which the competent authority has conferred, in whole or in part, its competence for the inspection and certification in the field of organic production in accordance with the provisions set out under this Regulation; it shall also include, where appropriate, the corresponding authority of a third country or the corresponding authority operating in a third country;
- (25) 'control body' means an independent private third party carrying out inspection and certification in the field of organic production in accordance with the provisions set out under this Regulation; it shall also include, where appropriate, the corresponding body of a third country or the corresponding body operating in a third country;
- (26) 'mark of conformity' means the assertion of conformity to a particular set of standards or other normative documents in the form of a mark;
- (27) the definition of 'ingredients' is that given in Article 6(4) of Directive 2000/13/EC;
- (28) the definition of 'plant protection products' is that given in Council Directive 91/414/EEC of 15 July 1991 concerning the placing of plant protection products on the market<sup>28</sup>;
- (29) the definition of 'Genetically modified organism (GMO)' is that given in Directive 2001/18/EC of the European Parliament and of the Council of 12 March 2001 on the deliberate release into the environment of genetically modified organisms and repealing Council Directive 90/220/EEC<sup>29</sup> and which is not obtained through the techniques of genetic modifications listed in Annex I.B of that Directive;
- (30) 'produced from GMOs' means derived in whole or in part from GMOs but not containing or consisting of GMOs;
- (31) 'produced by GMOs' means derived by using a GMO as the last living organism in the production process, but not containing or consisting of GMOs nor produced from GMOs;
- (32) the definition of 'feed additives' is that given in Regulation (EC) No 1831/2003 of the European Parliament and of the Council of 22 September 2003 on additives for use in animal nutrition<sup>30</sup>;

Page 89 of 93

<sup>&</sup>lt;sup>28</sup> OJ L 230, 19.8.1991, p. 1. Directive as last amended by Commission Directive 2007/31/EC (OJ L 140, 1.6.2007, p. 44).

<sup>&</sup>lt;sup>29</sup> OJ L 106, 17.4.2001, p. 1. Regulation as last amended by Regulation (EC) No 1830/2003 (OJ L 268, 18.10.2003, p. 24).

<sup>&</sup>lt;sup>30</sup> OJ L 268, 18.10.2003, p. 29. Regulation as amended by Commission Regulation (EC) No 378/2005 (OJ L 59, 5.3.2005, p. 8)

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (33) 'equivalent', in describing different systems or measures, means that they are capable of meeting the same objectives and principles by applying rules which ensure the same level of assurance of conformity;
- (34) 'processing aid' means any substance not consumed as a food ingredient by itself, intentionally used in the processing of raw materials, foods or their ingredients, to fulfil a certain technological purpose during treatment or processing and which may result in the unintentional but technically unavoidable presence of residues of the substance or its derivatives in the final product, provided that these residues do not present any health risk and do not have any technological effect on the finished product;
- (35) the definition of 'ionising radiation' is that given in Council Directive 96/29/Euratom of 13 May 1996 laying down basic safety standards for the protection of the health of workers and the general public against the dangers arising from ionising radiation<sup>31</sup> and as restricted by Article 12. of Directive 1999/2/EC of the European Parliament and of the Council of 22 February 1999 on the approximation of the laws of the Member States concerning foods and food ingredients treated with ionising radiation<sup>32</sup>.
- (36) 'mass catering operations' means the preparation of organic products in restaurants, hospitals, canteens and other similar food business at the point of sale or delivery to the final consumer.

<sup>&</sup>lt;sup>31</sup> OJ L 159, 29.6.1996, p. 1.

<sup>&</sup>lt;sup>32</sup> OJ L 66, 13.3.1999, p. 16. Directive as amended by Regulation (EC) No 1882/2003 (OJ L 284, 31.10.2003, p. 1).

### Annex X

# Specific Organic Aquaculture production rules

(Stocking density for aquaculture animals by species or group of species referred to in 11.12; 11.18; 11.20)

### **SECTION 1**

Organic production of salmonids in fresh water: Brown trout (*Salmo trutta*)—Rainbow trout (*Oncorhynchus mykiss*)—American brook trout (*Salvelinus fontinalis*)—Salmon (*Salmo salar*)—Charr (*Salvelinus alpinus*)— Grayling (*Thymallus thymallus*)—American lake trout (or grey trout) (*Salvelinus namaycush*)—Huchen (*Hucho hucho*)

Production system	On growing farm systems must be fed from open systems. The flow rate must ensure a minimum of 60 % oxygen saturation for stock and must ensure their comfort and the elimination of farming effluent.	
Maximum stocking density	Salmonid species not listed below 15 kg/m 3	
	Salmon 20 kg/m 3	
	Brown trout and Rainbow trout 25 kg/m 3	
	Arctic charr 25 kg/m 3	

### **SECTION 2**

Organic production of salmonids in sea water:

Salmon (Salmo salar), Brown trout (Salmo trutta) — Rainbow trout (Oncorhynchus mykiss)

Maximum stocking density	10 kg/m 3 in net pens
--------------------------	-----------------------

### **SECTION 3**

Organic production of cod (*Gadus morhua*) and other Gadidae, sea bass (*Dicentrarchus labrax*), sea bream (*Sparus aurata*), meagre (*Argyrosomus regius*), turbot (*Psetta maxima* [= *Scopthalmus maximux*]), red porgy (*Pagrus pagrus* [= *Sparus pagrus*]), red drum (*Sciaenops ocellatus*) and other Sparidae, and spinefeet (*Siganus spp.*)

Production system	In open water containment systems (net pens/cages) with minimum sea current speed to provide optimum fish welfare or in open systems on land.	
Maximum stocking density	For fish other than turbot: 15 kg/m <sup>3</sup> For turbot: 25 kg/m <sup>2</sup>	

### **SECTION 4**

Organic production of sea bass, sea bream, meagre, mullets (*Liza, Mugil*) and eel (*Anguilla spp.*) in earth ponds of tidal areas and costal lagoons

Containment system	Traditional salt pans transformed into aquaculture production units and similar earth ponds in tidal areas	
Production system	There shall be adequate renewal of water to ensure the welfare of the species, At least 50 % of the dikes must have plant cover  Wetland based depuration ponds required	
Maximum stocking density	4 kg/m <sup>3</sup>	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### **SECTION 5**

Organic production of Sturgeon in fresh water:

Species concerned: Acipenser family

Production system	Water flow in each rearing unit shall be sufficient to ensure animal welfare Effluent water to be of equivalent quality to incoming water	
Maximum stocking density	30 kg/m 3	

# **SECTION 6**

Organic production of fish in inland waters:

 $Species\ concerned:\ Carp\ family\ (\textit{Cyprinidae})\ and\ other\ associated\ species\ in\ the\ context\ of\ polyculture,\ including\ and\ other\ associated\ species\ in\ the\ context\ of\ polyculture,\ including\ and\ other\ associated\ species\ in\ the\ context\ of\ polyculture,\ including\ and\ other\ associated\ species\ in\ the\ context\ of\ polyculture,\ including\ and\ other\ associated\ species\ other\ o$ 

perch, pike, catfish, coregonids, sturgeon.

erch, pike, cattish, coregonids, sturgeon.	
Production system	In fishponds which shall periodically be fully drained and in lakes. Lakes must be devoted exclusively to organic production, including the growing of crops on dry areas.
	The fishery capture area must be equipped with a clean water inlet and of a size to provide optimal comfort for the fish. The fish must be stored in clean water after harvest.
	Organic and mineral fertilisation of the ponds and lakes shall be carried out in compliance with Annex I with a maximum application of 20 kg Nitrogen/ha.
	Treatments involving synthetic chemicals for the control of hydrophytes and plant coverage present in production waters are prohibited.
	Areas of natural vegetation shall be maintained around inland water units as a buffer zone for external land areas not involved in the farming operation in accordance with the rules of organic aquaculture.
	For grow-out "polyculture" shall be used on condition that the criteria laid down in the present specifications for the other species of lakes fish are duly adhered to.
Farming yield	The total production of species is limited to 1 500 kg of fish per hectare per year.

## **SECTION 7**

Organic production of penaeid shrimps and freshwater prawns (Macrobrachium spp.):

Establishment of production unit/s	Location to be in sterile clay areas to minimise environmental impact of pond construction. Ponds to be built with the natural pre-existing clay. Mangrove destruction is not permitted.	
Conversion time	Six months per pond, corresponding to the normal lifespan of a farmed shrimp.	
Broodstock origin	A minimum of half the broodstock shall be domesticated after three years operating. The remainder is to be pathogen free wild broodstock originating from sustainable fisheries. A compulsory screening to be implemented on the first and second generation prior to introducing to the farm.	
Eyestalk ablation	Is prohibited.	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Maximum on farm stocking	Seeding: maximum 22 post larvae/m 2
densities and production limits	Maximum instantaneous biomass: 240 g/m 2

# **SECTION 7a**

Organic production of crayfish;

Species concerned: Astacus astacus, Pacifastacus leniusculus

Maximum stocking density	For small-sized crayfish (<20mm): 100 individuals per m2. For crayfish of	
	intermediate size (20-50mm): 30 individuals per m2. For adult crayfish (>50	
	mm): 10 individuals per m2, provided that adequate hiding places are	
	available.	

# **SECTION 8**

Molluscs and echinoderms:

Production systems	Long-lines, rafts, bottom culture, net bags, cages, trays, lantern nets, bouchot poles and other containment systems. For mussel cultivation on rafts the number of drop-ropes shall not exceed one per square meter of surface area.
	The maximum drop-rope length shall not exceed 20 metres. Thinning-out of drop-ropes shall not take place during the production cycle, however subdivision of drop ropes shall be permitted without increasing stocking density at the outset.

# **SECTION 9**

Tropical fresh water fish: milkfish (Chanos chanos), tilapia (Oreochromis spp.), siamese catfish (Pangasius spp.):

Production systems	Ponds and net cages	
Maximum stocking density	Pangasius: 10 kg/m 3	Oreochromis: 20 kg/m 3

# **SECTION 10**

Other aquaculture animal species: none
